William A. Ruff, Assistant

This volume is the first of a series to summarize data for the construction industry as reported by general contractors, operative builders, and special trade contractors. The data are shown in three uniform groups of tables.

The facts for these tables were collected during the first half of 1936 by a canvass of contracting establishments in every State, city and county in the United States, by the Bureau of the Census, with funds provided by the Works Progress Administration. The data were tabulated, analyzed and published by the Business Census division, in the Bureau's branch in Philadelphia.

The individual tables in each group are identified by the same table number; all in the first group are Table 1, and so on. Table 1 contains data for the number of establishments, total work performed, personnel, and pay roll. Table 2, in addition to the items covered by Table 1, shows the cost of material installed, and the per cent of work performed represented by pay roll and by material. Table 3 shows figures for work performed separately for new construction and additions, and remodeling, repairs and maintenance. The figures for each of these groups are further separated by private construction and public construction.

In each group, are (1) a table for the United States showing data for each geographic division and State for all types and kinds of business combined, and (2) tables showing data by kind of business for the United States, each geographic division, each State, and (in the case of Table 1 only) each city of 500,000 or more inhabitants.

Additional volumes will be issued to show work performed by type of construction, employment by functional classes, monthly data for personnel, man-hours and pay roll for productive labor, and comparisons between the 1929 and 1935 census studies.

Construction reports are prepared under the supervision of George J. Lawrence, Chief, Construction Census.

CONSTRUCTION INDUSTRY: 1935

------o O o------

SECTION I

DEFINITIONS AND CLASSIFICATIONS

DEFINITION OF TERMS

Certain terms used in both the text and tables of this volume are to be interpreted in accordance with the following definitions:

Establishments. - Establishments whose principal business is performing construction work for others or that are places of business of operative builders are classed as construction establishments.

A construction establishment is a place in or from which are conducted the estimating, bidding, selling, and other central or branch office activities relating to construction. The report of the establishment covers, in addition to the above, operations at the site of construction (including field or job offices maintained at the site) as well as those at yards operated by the establishment for the storage and repair of equipment.

The establishment may be:

1. An office of a contractor or operative builder.
   In some cases, the office activities are conducted from residences.
2. A store or shop engaged in retail selling, service, or manufacturing work but whose 1935 gross receipts

from construction exceed their 1935 operating receipts from retail, service or manufacturing operations.

3. A real estate establishment that does construction work with its own forces. Included here are only the construction operations of such establishments.

Work Performed. - This is the total value of construction performed during the year by the reporting establishments. Total work performed includes all of the construction activities of the establishment in connection with new and repair, and private and public work. It is in terms of contract or order prices; not actual cost. (The figure for work performed by operative builders represents the work actually completed and is expressed in terms of the value of the project.) Work performed covers, however, only the work actually done, including that for partially completed jobs.

In the case of establishments engaged in two or more fields of business, the figures for work performed apply only to the construction work; receipts from all other sources being excluded.

Private Construction. - This represents projects owned by individuals, corporations and all other private agencies.

Public Construction. - This represents projects owned by Federal, State, county, municipal, or other governmental agencies. Some of the private construction may have been financed by public funds, but the classification here is on the basis of ownership.

New Construction, and Additions. - New work as well as major additions, such as the building of a wing to a structure are included in this category.

Remodeling, Repairs and Maintenance. - Included here are all repairs, maintenance and minor improvements.

Active Proprietors and Firm Members. - This class includes those devoting the major portion of their time to the business of the establishment. Corporate officers and executives of corporations are not proprietors. It should be noted that in the case of small establishments, proprietors may be engaged in productive work.

Employees (Average for the year). - This includes salaried officers of corporations, salaried office workers, wage earners who work at the site of construction, and all other paid employees, but does not include proprietors and firm members of unincorporated establishments. The average for the year was computed in the following manner. Each individual report shows the total for the year for the number of employees working during the pay period ending nearest the fifteenth of each month. These figures were added by kind of business groups to arrive at the number of man-months of employment. One twelfth of this figure is shown as the average number of employees for the year.

Pay Roll. - This represents the total amount of salary, wage, bonus, and commission payments to all persons employed by the establishment during the year 1935. Pay roll does not include proprietors' or partners' compensation.

Cost of Material Installed. - This represents the total cost delivered on the job of all materials furnished and used in construction (brick, cement, lumber, steel, and all other materials) and of all equipment furnished and installed (plumbing, heating, and electrical apparatus, elevators, and all other equipment incidental to the building). The figure does not include equipment that the building serves to house (factory machinery, power-generating equipment, and similar items). The material reported by each establishment is exclusive of that furnished by its subcontractors.

Geographic Divisions. - The nine geographic divisions used in this report as a basis for summarizing data by groups of States are those regularly used in census reports. The names of these divisions and the States that comprise each one are shown by United States Summary, Table 1, Page 2.

KIND OF BUSINESS

The Census of Business used a different report form for each of the fields of business activity that it covered---(retail trade, wholesale trade, construction by contractors, etc.). The form employed for reporting each establishment was the one corresponding to the principal kind of business of the establishment. All data for an establishment engaged in two or more fields of business were reported in the one field that was of greatest importance as measured by gross receipts. This is with the exception of establishments engaged in both insurance and real estate, and in construction each of which fields of activity was reported separately.

The manner in which other establishments engaged in two or more fields of business were reported will be evident from the procedure for electrical contractors who often maintain their places of business in stores in which they sell electrical appliances at retail. The reports for establishments of this kind are included in the Census of Business as retail trade or contracting, depending upon which of these kinds of operations accounted for the major portion of the gross receipts of the establishments. This principal of classification has particularly affected the figures for electrical, heating, plumbing, and sheet metal establishments which are classed as construction only if receipts from this source are greater than those from retail trade, wholesale trade, service, or any other field covered by the Census of Business. There is no wholly adequate basis for ascertaining the number of establishments or the amount of business affected by this procedure.

Contracting Establishments. - The principal of classifying an establishment in accordance with the major portion of gross receipts was followed in allocating reports of establishments to specific kinds of business in the construction field. For such reports, however, establishments engaged in two or more kinds of business showed each kind in the order of its relative importance. On the basis of this information, new groups were set up for certain combined kinds of business. The report form, for example, shows heating and piping as one kind of business, and plumbing as another. Because many establishments performed both of these kinds of work they were shown in the tables as a special group for heating, piping and plumbing.

General Contractor. - This term designates an establishment whose major business consists of contracting with the owner (or his agent) for the entire work on a given construction project, being responsible for the execution of the whole, and usually doing some portion of the actual work with its own forces.

General Contractors - Building. - This designates general contracting establishments most of whose work during 1935 consisted in the construction of buildings.

General Contractors - Highway. - This designates general contracting establishments most of whose work during 1935 consisted of highway construction. Highway construction is all work regularly done by highway contractors and includes roads, streets, alleys, sidewalks, guard rails and fences, parkways, parking areas, airports, bridle paths, athletic fields, highway bridges, grade separations involving highways, light construction sewage and waterworks improvements.

General Contractors - Heavy. - This designates general contracting establishments most of whose work during 1935 consisted of heavy construction as defined on report Form 60 under Inquiry 4 for Work Performed.

Operative Builders. - An operative builder is the owner as well as the builder of construction projects. As far as the actual construction work is concerned, he performs the functions of a general contractor, that is: he has the responsibility of the entire project, usually does some part of the work with his own forces and sublets the remainder. Speculative builder, owner - builder and development companies are included with operative builders.

Special Trade Contractors. - This term designates establishments engaged in specialized lines of work. Some of this work is performed under subcontract for a general contractor, and some is done directly for the owner.

The report form lists twenty-six kind-of-business classifications for special trade contractors, including the classification for "other". An analysis of the reports received for air conditioning, cement gun, and several other kinds of business showed that they were too few in number to publish as separate items. At this time it was also found desirable to show certain combined kinds of business as separate items. The result was that twenty-four kind-of-business groups were established for special trade contractors. These are shown in the United States Summary Table 1, Page 1.

DISCLOSURES

The Bureau of the Census in order to avoid disclosing the operations of individual establishments does not show detailed figures unless they are for three or more establishments.

Figures that for this reason cannot be shown for a given kind of business are either combined with a related kind or included with "other". This applies, in the main, to the tables for States and cities. In the case of the tables for the United States and for most of the geographic divisions, it has been possible to show data for each kind-of-business class.

SECTION II

GENERAL ANALYSIS OF CONSTRUCTION BY CONTRACTORS

INTRODUCTION, SCOPE AND PROCEDURE

Before turning to the detailed results of the 1935 census study it is important to consider certain aspects of construction in general, and to be familiar with the objectives and general procedure of the census study. These matters are treated in the following paragraphs.

The Importance of Construction. - The activities classed as construction are directed at providing and maintaining the greater part of the entire physical plant of the nation. This includes the structures needed for manufacturing operations and for other commercial purposes as well as those for housing; the construction of streets, roads and highways with their bridges, tunnels, and other elements; and the construction of such facilities as sewerage systems, irrigation and drainage, large vehicular or railroad bridges and tunnels, and other projects generally known as public works or public utilities.

Construction, in addition to the objectives that it accomplishes, is of great importance, measured either in terms of the number of persons that look to it for their livelihood, or by the expenditures that it makes for materials and equipment. Hence, its progress and what it is doing concern the immediate future plans of many other industries.

A substantial proportion of the total number of the country's workers are employed in construction. Large sums are disbursed directly for salaries and wages, and the expenditures for material and equipment affect many related industries engaged in manufacturing as well as those engaged in transportation and other fields.

Differences Between Census and Other Studies. - A large amount of data for construction have been collected in connection with studies made by various agencies. Each of these studies, however, is confined to a single set of figures such as the amount of construction, wage payments, and so on, and further, is for a limited territory. It is recognized that statistical data as collected at short intervals are essential for reflecting changes in business conditions. The necessity of obtaining such information as currently as possible, however, imposes limitations of both content and coverage.

It was the object of the study by the Bureau of the Census to secure on a comparable basis most of the pertinent facts for construction by contractors. The collection of these facts has been accomplished on a nation wide basis. It is believed that their summary, as presented in part in this volume, will not only serve to reveal the significant relationships between various factors in the operations of contractors, but will also serve as a background for the possible extension of statistical data from other sources.

Scope of Construction by Contractors. - All data presented here for construction are for establishments the major portion of whose operations are performed as a general contractor, operative builder, or special trade contractor. In addition to the work performed by such agencies, construction is also executed by force account, that is: by the employees of others than contractors. A large amount of force account work is ordinarily done by Federal, State, county, township and municipal governments, public utilities and manufacturing organizations. The concept of force account work could be logically extended to include the construction work performed by farmers and householders with or without the assistance of an odd job man. That there is a considerable volume of work in this category is evident from the direct-to-user sales of construction material and equipment by mail order and other establishments.

It was the task of the Census of Business to secure data for establishments comprising the business community. The method established for doing this involved a canvass of all business establishments, and their enumeration on a report form corresponding to the major kind of business of the establishment (contractors engaged in construction, retail trade, etc.). It is to be noted that governmental agencies were not included in the canvass, and that even in the case of manufacturing organizations that were canvassed, the construction work that they performed did not represent their main business. These conditions made it impossible for the Census to collect data for construction by force account.

Census Studies of Construction for 1929 and 1935. - The first study of the contracting group of the construction industry by the Bureau of the Census covered the year 1929. Studies by other agencies show that while the total amount of construction for that year was somewhat smaller than the amounts for some of the preceding years, it was still at a high level. For each of the years following 1929, the amount of construction became smaller until the lowest figure was registered for 1932. The figures for

1935 show considerable increase over those for 1932, but are still only a fraction of the ones for 1929. From this brief resume of the movements of the total amount of construction, it is seen that of the two studies by the Bureau of the Census, the one for 1929 portrays conditions for a year of considerable activity while the study for 1935 covers a year with a much smaller volume of work.

It is well known that construction operations are characterized by extremely wide fluctuations. The two studies by the Bureau of the Census afford a basis for ascertaining what this means not only in terms of the aggregate amount of work, but also in terms of personnel. It is believed that the presentation of this information by kind of business, and in other detail will make it of particular value for the interpretation of many of the problems of the construction industry.

Construction statistics from the census studies of 1929 and 1935 are not directly comparable. This is because of differences in procedure and scope for the two studies.

The 1929 study was directed at securing data primarily from establishments that handled work amounting to $25,000 or more. Reports were received from 30,597 establishments of this kind, and were tabulated in full detail. It was not possible to define limits for the amount of work handled by an establishment in 1935 that would correspond with the figure of $25,000 set for the 1929 reports. The 1935 tabulations consist of data furnished by all establishments that handled work of $500 or more. These conditions vitiate direct comparisons.

A comparison of data for identical establishments for 1929 and 1935 is to be presented in a later volume.

Information Collected. - The determination of the kind of information to be collected was made by the Bureau of the Census with the cooperation of representatives of contracting groups and other leaders of the construction industry. Included here are those who devoted considerable time to developing for the Construction Code Authority a research program, the results of which were available for planning the census study.

The data considered basic and practicable to collect include the kind of business of the establishment, legal form of organization, contracts or orders received, work sublet, work performed in detail by type of construction and also classed by new construction and repairs and by private and public, cost of materials and equipment installed, personnel, and pay roll. This is shown in greater detail by the copy, at the end of this volume, of the report form developed for recording the information for the individual contracting establishments. Two other report forms were also used in the canvass. The three forms are summarized by use in the canvass, and by content as follows:

Field Canvass - Form 60. - This contains information for all items referred to in this volume. A copy of Form 60 appears at the end of this volume.

Field Canvass - Short Form. - This contains information for kind of business, value of work performed, active proprietors and firm members, employees, and pay roll.

Mail Canvass Form. - This form shows data only for kind of business and the dollar value of work performed.

Method of Canvass. - Reports from contracting establishments were obtained by means of a field canvass. For this purpose, the entire United States was divided into 33,976 enumeration districts. An enumerator was assigned to each district and, in accordance with a systematic plan of canvass, was responsible for calling upon every business establishment in his district.

Limitations of the Canvass. - The value of construction reported by the census is in line with the amounts reported by other agencies. For the following reasons, however, the census figure must be considered incomplete.

The enumerators called only at places of business that were readily recognizable as such. It is known that many of the smaller contractors have their places of business in their homes. Unless signs were displayed, the enumerators did not call upon such contractors. To secure further information for such establishments, use was made of a supplementary mail canvass based upon lists of names for general contractors, operative builders, and the following kinds of special trade contractors:

- Cement Gun
- Electrical
- Elevator
- Heating, piping and air conditioning
- Insulation
- Marble
- Mason
- Painting, paperhanging and decorating
- Plastering and lathing
- Plumbing
- Resilient flooring
- Roofing and sheet metal
- Steel erection
- Terrazzo and mosaic
- Tile
- Wood floor

A 25% response was received to the report forms sent by mail. Among these were replies of many large establishments for which construction schedules had not been received in the field canvass. From this it seems reasonable to assume that among the 75%

of the establishments that did not respond to the mail canvass were many that had not been covered by the field canvass.

There is no basis for determining the degree of completeness of the census study. Because of the large number of reports included in this study, however, it is believed that the relationships that are found to exist for certain items of information will be applicable to the entire field of construction by contractors.

Total Work Performed by Contracting Establishments in 1935. - 75,047 contracting establishments located in the United States reported to the Bureau of the Census for the year 1935. Although this was a year for which the value of construction was small in comparison with that for many of the earlier years, the amount of work performed by these establishments in 1935 aggregated $1,622,862,000.

The Census figure for work performed is not directly comparable with the figures reported by private organizations for the dollar value of contracts awarded. This is because of the differences in scope and content between the figures for work performed and those for contracts awarded.

The Census figures for work performed represent all of the work reported by contracting establishments. The figures of the private organizations for contracts awarded are based on reports for individual projects, and do not include projects below certain established minimum values. From this standpoint, the figures for contracts awarded would be lower than the ones for work performed. Data for force account construction, however, are not included in the Census figures but are, to a large extent, accounted for by the figures reported by the private organizations.

This latter consideration is probably of greater consequence than the matter of the size of the projects included, and would have the net result of causing the Census figures to be lower than the others.

Another important consideration is the elapse of a period of time between the award of a contract for construction and the performance of any sizeable proportion of the actual construction work. The length of the period cannot be stated accurately for the total amount of construction because it varies with the size and kind of project. The amount of contracts awarded during the latter part of 1934 and all but the latter part of 1935, however, will determine the amount of work performed for the year 1935.

According to the figures reported by a private statistical organization and shown in Chart 1, contracts awarded for the latter part of 1934 and the first half of 1935 were at a much lower level than for the last half of 1935. This condition would cause the figure for contracts awarded for 1935 to be greater than the figure for work performed for 1935.

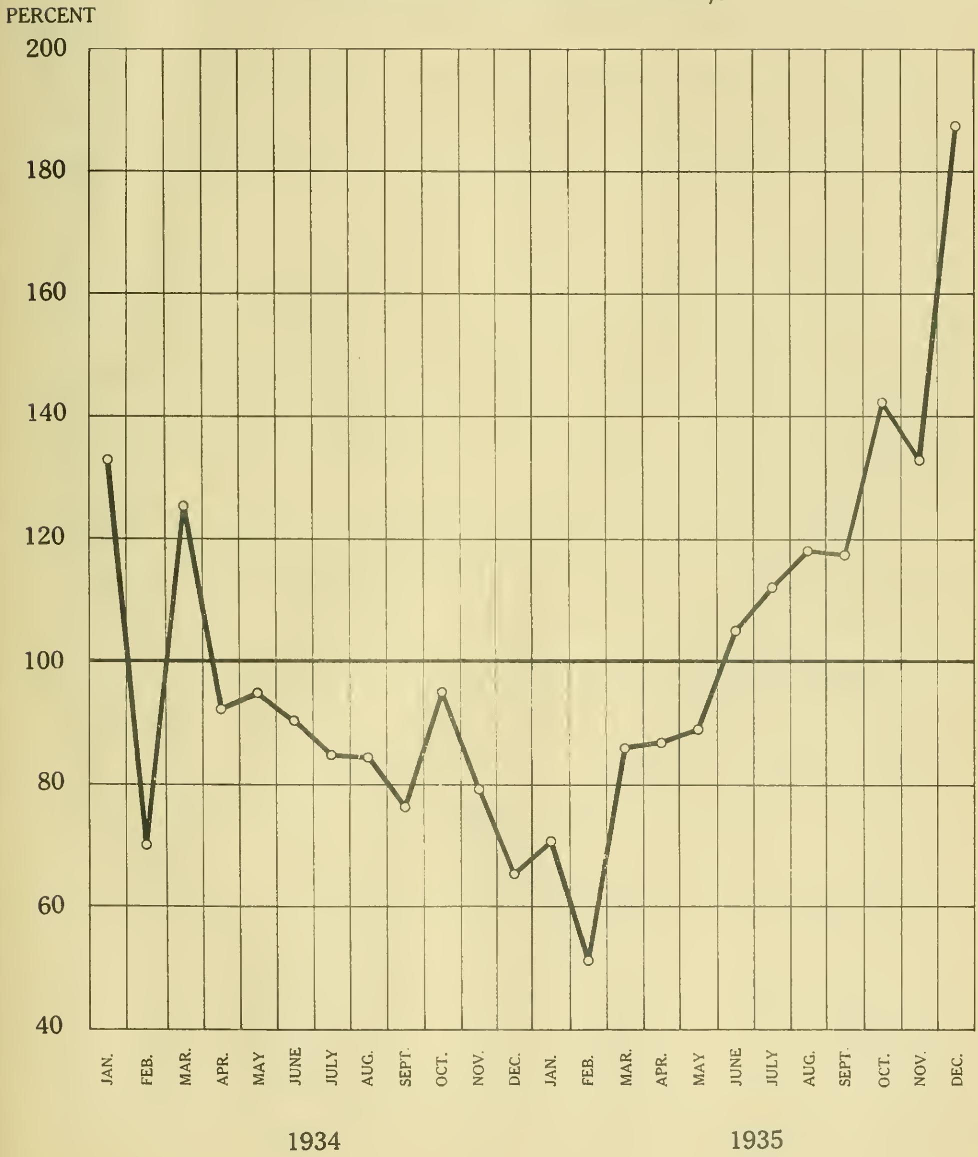
WORK PERFORMED BY KIND-OF-BUSINESS GROUPS

The figure of $1,622,862,000 previously mentioned represents work performed by all reporting establishments of general contractors and special trade contractors. Of the total contracts that they receive, general contractors sublet a considerable part to special trade contractors. This, however, does not result in duplication in the aggregate figure of $1,622,862,000 for work performed because each contractor reported only the work performed by his organization.

Table A shows the number of establishments and the dollar value of work performed by kind-of-business groups (general contractors-

CHART 1 - CONSTRUCTION CONTRACTS AWARDED

BASE: 1934 AND 1935 = 100 %



building, general contractors - highway, general contractors - heavy, and special trade contractors). It is important to remember that an establishment is classed by the kind of business that accounted for the major portion of its gross receipts during 1935, and that the total work of the establishment is shown in this class. This latter consideration, however, has little affect on the four kinds of business shown in Table A, that is: the total amount of work performed by general contractors engaged in building contains very little heavy or highway construction.

Special trade contractors perform but little work in connection with highway or heavy construction. About all of their construction work is in connection with building construction. Work performed by special trade contractors is thus to be added to that by general contractors engaged in building in order to arrive at the total for building.

In accordance with the above considerations, the figures of Table A may be used as a general indication of the amount of construction of various kinds performed by contracting establishments in 1935.

TABLE A. - ESTABLISHMENTS, AND WORK PERFORMED BY KIND OF BUSINESS

	Establishments		Dollar Value of work performed	
	Number	% of total	Amount (Add 000)	% of total
Total	75,047	100.0	$1,622,862	100.0
General Contractors	11,491	15.3	944,279	58.2
Building 1/	8,337	11.1	398,980	24.6
Highway	2,116	2.8	280,332	17.3
Heavy	1,038	1.4	264,967	16.3
Special Trade Contractors	63,556	84.7	678,583	41.8

1/ Includes operative builders.

1935 CONSTRUCTION BY STATES

Many contractors perform work in States other than the ones in which their home or branch offices are located. The report form utilized for this study to secure data from the individual contracting establishments provides for information for the location of the construction work by States. Such information is to be tabulated at a later date. For that part of the study summarized in this volume, all figures for work performed are in accordance with the location of the reporting contracting establishments.

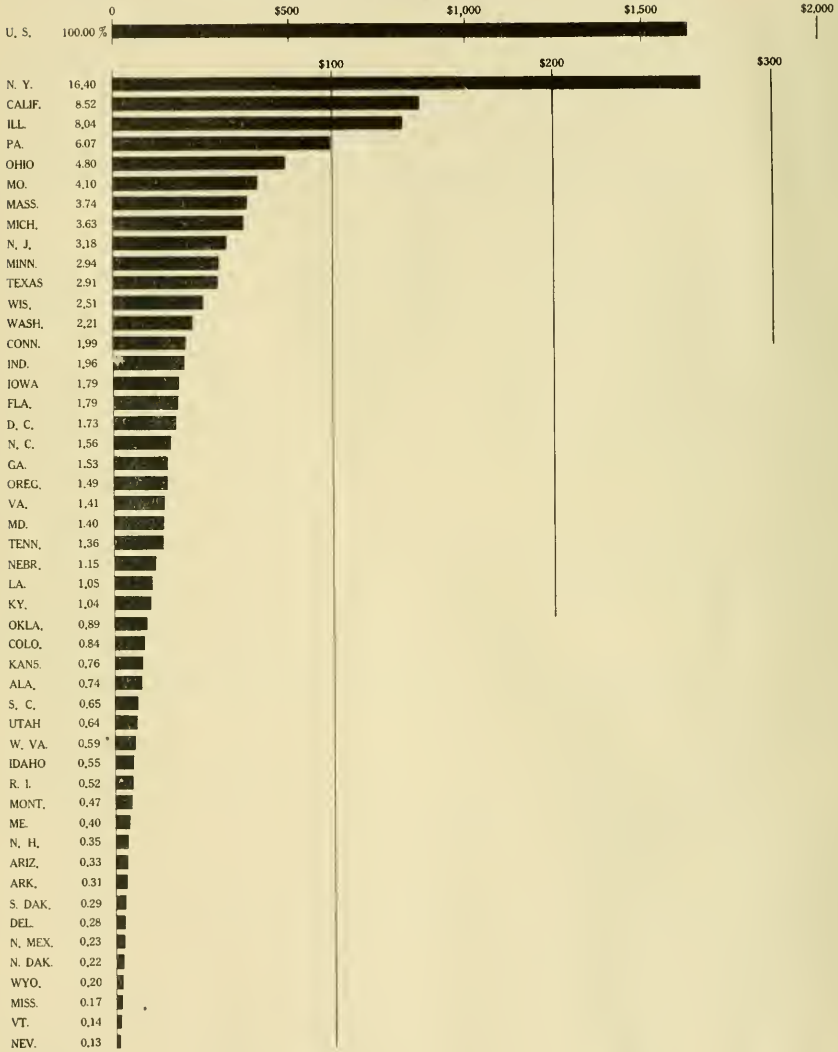
Whether it is preferable to have data for work performed shown by the location of the work or by the location of the establishment that performs the work depends upon the use to which the data are to be put. For a problem involving the determination of the size of the markets for construction material or equipment, the figures on the basis of the establishment location would be the more useful. On the other hand, if it were required to ascertain per capita expenditures for construction, or to make some other comparison between the value of construction and other statistics that are for States or other geographical units, it would be necessary to have the construction data by the location of the work.

The amount of work performed by the contracting establishments of each State is shown graphically by Chart 2. From this chart it is possible to read not only the total amount for each State but also to visualize the manner in which the total for any one State compares with the total for the United States and for other States.

In the detailed tables at the end of this volume, data are shown for contracting establishments located in the thirteen cities that

CHART 2 - TOTAL VALUE OF WORK PERFORMED FOR THE UNITED STATES, AND BY STATES

(scales are in million dollars)



had 500,000 or more inhabitants according to the 1930 Census of Population. At this part of the discussion, it is of interest to note that the work of the contracting establishments in the thirteen largest cities represents 34.7% of the work performed by all contracting establishments in the United States.

From the summary table below it is seen that a relatively large proportion of the total work of each group of contracting establishments (except highway) is performed by establishments located in cities of 500,000 or more inhabitants.

TABLE B.- WORK PERFORMED FOR THE UNITED STATES, AND FOR CITIES OF 500,000 OR MORE INHABITANTS

	United States	Cities of 500,000 or more inhabitants	Cities as per cent of United States
Total	$ 1,622,862,000	$ 562,327,000	34.7%
General contractors	944,279,000	293,062,000	31.0
Building 1/	398,980,000	138,040,000	34.6
Highway	280,332,000	34,459,000	12.3
Heavy	264,967,000	120,563,000	45.5
Special trade contractors	678,583,000	269,265,000	39.7

1/ Includes operative builders.

DIFFERENT FORMS USED FOR REPORTING

All figures stated so far for the 1935 census study are for all of the reporting contracting establishments of which there are 75,047. Throughout the remainder of this discussion it will be necessary to refer to data based on reports from a smaller number of establishments. This condition resulted from the necessity of using for this study three report forms that were not uniform in content, and as explained on page XIX.

The number of each of these three kinds of report forms received, and their relative importance as measured by the dollar value of work performed is shown by Table C.

TABLE C. - NUMBER OF ESTABLISHMENTS, AND DOLLAR VALUE OF WORK PERFORMED, BY REPORT FORMS

Report form	Number of establishments	Dollar value of work performed
Total for all forms	75,047	$ 1,622,862,000
Field canvass	69,838	1,457,710,000
Form 60	46,429	1,330,835,000
Short form	23,409	126,875,000
Form for mail canvass	5,209	165,152,000

PERSONNEL AND PAY ROLL

Employees (average for the year). - The average number of employees for the year 1935 was determined from data shown on the report forms for the number of employees working during the pay period ending nearest the fifteenth of each month. The figure for 69,838 establishments is 409,137 employees. This includes all classes of employees; those in the office as well as those at the site. Proprietors and firm members of unincorporated establishments are not included with the number of employees. Neither are they included in the salary figures to be mentioned later.

In the use of these figures, consideration must be given the fact that changes are constantly occuring in the personnel of contracting establishments. As parts of a construction project are completed, men are separated from the pay roll. On the other hand, the starting of a new project results in the addition of workers. Such changes made with considerable frequency may result in the figures for one week of a month not being representative of employment throughout the entire month.

Proprietors and firm members must be taken into consideration in accounting for the number of persons engaged in the work of contracting establishments. Their importance is apparent from the fact that there were 69,193 of them for 69,838 establishments. The figure of 69,838 for the number of establishments includes incorporated as well as unincorporated ones. Some of the unincorporated establishments were operated by individual proprietors and others were operated by two or more partners; there were, however, relatively few partnerships that had as many as three firm members. These considerations point to the conclusion that a majority of the contracting establishments are unincorporated.

This is true of all establishments combined, and appears to hold also for general contractors engaged in building, and for special trade contractors. It possibly does not apply to the highway and heavy contracting groups. (See Table D).

Pay Roll. - The total pay roll for the year for all classes of employees amounted to $470,275,000.

TABLE D. - UNITED STATES TOTALS--ESTABLISHMENTS, PROPRIETORS AND FIRM MEMBERS, EMPLOYEES AND PAY ROLL
(Field canvass only)

Kind of Business	Number of establishments	Active proprietors and firm members	Employees (Average for year)	Pay Roll (add 000)
Total	69,838	69,193	409,137	$470,275
General Contractors	9,883	8,286	258,344	277,912
Building 1/	7,241	6,433	106,366	120,316
Highway	1,723	1,298	87,242	76,403
Heavy construction	919	555	64,736	81,193
Special Trade Contractors	59,955	60,907	150,793	192,363

1/ Includes operative builders.

Average Amount of Salary and Wage Payments Per Person Employed. - The figures presented for the year for the average number of employees and for the total pay roll do not afford a basis for computing the average annual earnings of the individual worker. Most construction workers, as has been already noted, are employed by a number of different contractors in the course of the year. From this it is evident that the figures reported by a contracting establishment are likely to include certain workers some months of the year, and different workers for other months of the year.

Using the data for the average number of employees and for salary and wage payments would thus give only the average salary and wage payments "per person employed" by the contracting establishments. Even in this restricted sense, the average would be capable of use only as a very crude statistical measure because (1) it is based on all classes of employees combined (different classes of employees receive different rates of pay and the number in each class would not necessarily represent an unchanging proportion of the total), (2) wage rates differ by locality and kind of business as well as by general class of employment such as clerical workers, skilled labor and common labor, and (3) the data available in this volume are by the location of the reporting establishment which might differ from that of the project on which the employees are engaged (construction rates are established by small localities: not over broad areas). The foregoing limitations are stated at considerable length by way of explaining the exact nature of the data, and are to be kept in mind in reading the following paragraph.

The average amount of salary and wage payments per person employed was $1,149 for the United States. The manner in which the figures compare

BUREAU OF THE CENSUS

for each State is shown on the map, Chart 3. These figures are of usefulness, not in terms of the absolute amount for each State, but only as a rough measure for comparing one State with another.

EXPENDITURES BY CONTRACTING ESTABLISHMENTS

Pay roll and material.- Expenditures of 46,429 contracting establishments for material and equipment furnished and installed by them in construction work amounted to $559,441,000. This accounts for 42.0% of the figure of $1,330,835,000 representing the total value of the work performed by these establishments. These summary figures for the United States are shown in Table E.

TABLE E.- UNITED STATES TOTALS - ESTABLISHMENTS, WORK PERFORMED, PAY ROLL, AND COST OF MATERIAL

	Number of establishments	Dollar value of work performed (Add 000)	Pay Roll 2/ (Add 000)	Cost of material installed (Add 000)	Percent of total work performed		
					Pay roll and mat'l	Pay Roll	Material
Total	46,429	$1,330,835	$436,802	$559,441	74.8	32.8	42.0
General contractors	9,753	829,058	275,928	345,603	75.0	33.3	41.7
Building 1/	7,139	352,329	118,618	162,641	79.9	33.7	46.2
Highway	1,711	240,458	76,250	97,587	72.3	31.7	40.6
Heavy	903	236,271	81,060	85,375	70.4	34.3	36.1
Special trade contractors	36,676	501,777	160,874	213,838	74.7	32.1	42.6

1/ Includes operative builders.

2/ Includes no compensation for proprietors and firm members of unincorporated businesses.

From Table 2 for the United States (See page 45) it is seen that expenditures for material are not of equal importance for each kind of contracting business. For establishments engaged primarily in wrecking or demolition work, material amounts only to 5.3% of work performed. The figure for contracting establishments whose business consists primarily of elevator installation is 53.3%. Material expenditures for the other kind-of-business groups fall between the low figure for wrecking and demolition, and the high figure for elevator installation.

Table E also shows the percent that pay roll is of the total value of the work performed. Here, again, detailed figures appear in Table 2 from which it is seen that the smallest percent for pay roll is 23.6% for establishments handling plumbing with sheet metal, and the highest is shown by stone setting establishments with a figure of 48.4%.

In connection with the figures for pay roll, it is important to note that they do not include compensation for proprietors and firm members of unincorporated businesses. It is necessary to take this factor into consideration in any analysis involving the use of the pay roll figures.

OPERATING EXPENSES AND PROFIT OR LOSS.

This study does not show data for the operating expenses of contracting establishments. It is possible, however, to arrive at combined figures for operating expense and profit or loss by deducting pay roll and material expenditures from work performed.

Operating expenses include such items as office rent, light, heat, office supplies, telephone, telegraph, postage, travel, workmen's compensation insurance, contract bond premiums, rental of equipment, depreciation and taxes. These items are not of equal importance for all contracting establishments. Rental of equipment, for example, would apply mainly to highway, and heavy construction establishments. Also, in the case of these establishments, rates for workmen's compensation insurance would be highest. In using these figures, it should be also recognized that compensation for proprietors and firm members of unincorporated establishments are not included in the amounts for pay roll.

Operating expense and profit or loss for all contracting establishments is 25.2% of the figure for work performed. The percents for kind-of-business groups differ at least partly because of the varying degrees of importance of certain expense items by groups, and are as follows:

General Contractors -	building	20.1%
	highway	27.7
	heavy	29.6
Special Trade Contractors		25.3

NEW CONSTRUCTION AND REPAIRS

During the past few years, widespread efforts have been made to increase the amount of remodeling, repair and maintenance work in connection with building and construction. This was a period with a relatively small amount of new construction. Hence remodeling, repair and maintenance was of prime importance to many different business groups. Property owners and their agents were interested in having their properties maintained in good condition. Both contractors and those concerned with the marketing of building and construction material and equipment had the common interest of promoting such work as sources of business for their organization.

It is not possible to ascertain from the data of the 1935 census study of construction how repair work developed over a period of years. It is, however, possible to show the amount of such work performed by contractors during the year 1935, and the relative amount of such work as compared with the total work of the contracting establishments.

Reports from 46,429 contracting establishments show total work performed as $1,330,835,000. Of this amount, $961,021,000, or 72.2%, is for new construction, and $369,814,000, or 27.8%, is for remodeling, repairs and maintenance. These figures are for all kinds of business combined for the United States. Chart 4 shows the relative amount of new construction and repairs for each State, for all kinds of business combined.

There are considerable differences in the importance of new construction and repairs by kind-of-business groups. Table F shows that remodeling, repairs and maintenance account only for 13.9% of the total work of general contractors, and by far the greater part of this is by those general contractors engaged primarily in building. For general contractors engaged primarily in highway, and in heavy construction, remodeling, repairs and maintenance represent respectively 6.2% and 8.2% of their total work.

In the case of the special trade contractors group, remodeling, repairs and maintenance becomes of very real importance. It represents 50.7% or slightly more than half of the total amount of work that they performed. Table 3 starting on Page 81 shows figures for work performed by new construction and additions, and by remodeling, repairs and maintenance, by kind of business.

PRIVATE AND PUBLIC CONSTRUCTION

The dollar value of work performed was secured separately by private and by public construction. At the time that the report form was prepared, two possible ways of defining private and public construction were considered. One was in accordance with the source of the funds. The other was in accordance with the ownership of the project. It was concluded that the latter basis was preferable as likely to result in data of greater accuracy.

In the case of certain kinds of construction work performed by private

TABLE F. - UNITED STATES TOTALS - WORK PERFORMED BY NEW CONSTRUCTION AND ADDITIONS, AND REMODELING, REPAIRS AND MAINTENANCE

Kind of Business	Number of establishments	Work performed				
		Total	New construction and additions		Remodeling, repairs, and maintenance	
		(Add 000)	Amount (Add 000)	% of total	Amount (Add 000)	% of total
Total	46,429	$1,330,835	$961,021	72.2	$369,814	27.8
General contractors	9,753	829,058	713,895	86.1	115,163	13.9
Building 1/	7,139	352,329	271,571	77.1	80,758	22.9
Highway	1,711	240,458	225,491	93.8	14,967	6.2
Heavy	903	236,271	216,833	91.8	19,438	8.2
Special trade contractors	36,676	501,777	247,126	49.3	254,651	50.7

1/ Includes operative builders.

agencies, there was often an alternative of securing funds either from public or from private sources. Governmental agencies were particularly active in the financing of construction operations during 1935, but it was felt that the individual contractor, especially the special trade contractors to whom work had been sublet by general contractors would not in all cases know the sources of the funds. Even the contractors operating as subs, however, would be likely to be able to identify the work that they performed as owned by private or by public agencies. Such information is usually definitely stated in the plans and specifications on which their contracts or orders are based. As used here, then, private construction designates projects owned by individuals, corporations, and all other private agencies. Public construction means projects owned by Federal, State, county, municipal or other governmental agencies.

Of the figure of $1,330,835,000 for the total work performed by 46,429 contracting establishments, $733,248,000 or 55.1% was for private construction, and $597,587,000 or 44.9% for public construction. In order to obtain these amounts for private, as well as for public construction, it is necessary to add the individual amounts shown under new construction and additions, and remodeling, repairs and maintenance. This applies to Table G, and also to Table 3 starting on page 81. This latter table contains detailed data by kind of business.

A general picture of the importance of private and of public construction by certain kinds of business is given by Table G. The figures here are a rearrangement of those of Table 3.

From the figures of Table G, it is seen that of the total figure of $733,248,000 for private construction, general contractors engaged in heavy and in highway construction performed $68,802,000, or 9.4%. Of the remainder, $240,465,000, or 32.8% was performed by general contractors engaged in building, and $423,981,000, or 57.8% by special trade contractors.

Of the total figure of $597,587,000 for public construction, general contractors engaged in heavy and highway construction performed $407,927,000, or 68.3%, general contractors engaged in building, and operative builders performed $111,864,000, or 18.7% and special trade contractors $77,796,000, or 13.0%.

By similar rearrangement of the data in Table 3, it is possible, in the manner illustrated, to ascertain the distribution of work performed between private and public for States or cities of 500,000 or more inhabitants, and by kind of business.

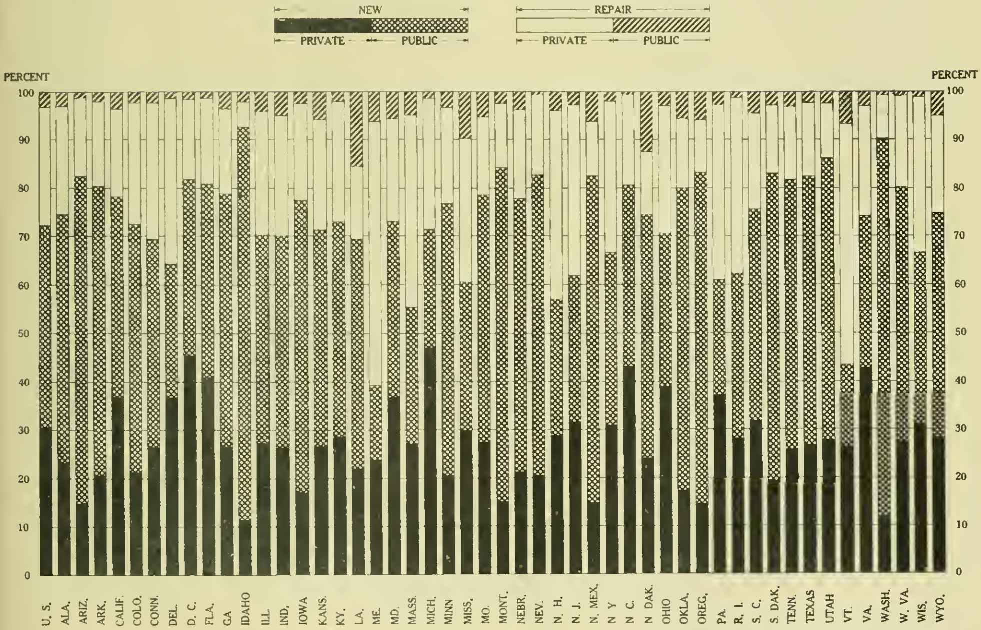
Table G - UNITED STATES TOTALS - WORK PERFORMED BY PRIVATE OWNERSHIP, AND BY PUBLIC OWNERSHIP

Kind of business	Number of establishments	Total (Add 000)	Private (Add 000)	Public (Add 000)
Total	46,429	$1,330,835	$733,248	$597,587
General contractors	9,753	829,058	309,267	519,791
Building 1/	7,139	352,329	240,465	111,864
Highway	1,711	240,458	17,059	223,399
Heavy	903	236,271	51,743	184,528
Special trade contractors	36,676	501,777	423,981	77,796

1/ Includes operative builders.

Chart 4 shows the relative proportions that private construction and public construction is of the total work performed by the contracting establishments for each State.

CHART 4 - PERCENT OF TOTAL WORK PERFORMED FOR NEW AND REPAIR, AND FOR PRIVATE AND PUBLIC CONSTRUCTION



EXPLANATION OF TABLES

In the following pages, detailed data by kind of business are shown by three sets of tables as follows:

Table 1 contains data for the number of establishments, work performed, personnel and pay roll. The two columns at the left of the table for "Number of Establishments" and for "Value of Work Performed" contain data for all reporting establishments, that is: reports from both of the report forms of the field canvass and from the mail canvass (See Page XIX). The data contained between the two sets of double vertical lines are from both of the report forms of the field canvass. The data in the two right hand columns of the table are from the mail canvass.

Table 2 is based on reports of the field canvass, Form 60. In addition to the items mentioned for Table 1, Table 2 contains data for cost of material installed and also shows the per cent of the total work performed that is made up of pay roll and of material.

Table 3 is, as in the case of Table 2, based on reports of the field canvass, Form 60. Table 3 shows the number of establishments, and the value of work performed. The latter figure is shown in detail for new construction and additions, and remodeling, repairs and maintenance. Each of these two items are further broken down for private and public construction.

In the case of each set, the tables appear in the following order:

CONFIDENTIAL GOVERNMENT REPORT

Section 8 of the Act creating the Department of Commerce and Labor, approved February 14, 1903, provides that: "The Secretary of Commerce shall from time to time make such special investigations and reports * * * which he himself may deem necessary and urgent." Acting upon this authority, I have authorized and instructed the Director of the Census to take a Census of Business covering the calendar year 1935. We ask for the cooperation and assistance of the business men of the United States in this undertaking and assure them that their individual reports will be held *absolutely confidential.* Only sworn employees of the Bureau of the Census will be permitted to examine your report, and no information will be given to any person, whether in Government service or private life, which would disclose, exactly or approximately, any of the facts or figures in your report. The information will be used for *statistical purposes only.*

DANIEL C. ROPER, *Secretary of Commerce.*

BUREAU OF THE CENSUS
WASHINGTON

SUPERVISOR'S DISTRICT
No. ____________
State ____________
ENUMERATION DISTRICT
No. ____________
County ____________
CONSECUTIVE NUMBER OF REPORT
No. ____________

CENSUS OF BUSINESS: 1935

A separate report on this form should be prepared by every general contractor, operative builder and subcontractor (special trade contractor) for the home office and for each branch office (other than field offices established for the individual job).

This report should cover, if possible, the full year's operations for the calendar year 1935, even if ownership has changed during the year. If more convenient the report may cover a twelve-month period ending within a month before or after December 31, 1935.

1. DESCRIPTION OF ESTABLISHMENT:

a. NAME OF ESTABLISHMENT ____________

b. NAME OF OWNER ____________ RACE (*not for corporations*) ____________ (White, Negro, Oriental, other)

c. LOCATION OF ESTABLISHMENT
State ____________ County ____________ Township ____________
Name of city, town, or village ____________
Street and number ____________
Is this street number located within the corporate limits of the city, town, or village named above? (*Yes or No*) ____________

d. ADDRESS (HOME OFFICE OR BUSINESS ADDRESS) OF OWNER ____________

e. List any other addresses in this city or its immediate environs at which your organization maintains offices (*other than field offices*), yards, or other facilities (*covered in this report*):

____________ (Name) ____________ (Street address)
____
____

(1) ____________
(2) ____________
(3) ____________
(CODE—Do not use)

f. LEGAL FORM OF ORGANIZATION (Place check mark in proper square)
☐ Individual proprietorship.
☐ Partnership.
☐ Corporation.
☐ Other (*specify*): ____________

g. Give total number of establishments or units (*exclusive of field offices*) owned by this organization, anywhere in the continental United States (*including the establishment for which this report is prepared*) ____________

2. KIND OF BUSINESS:

(4) ____________
(CODE—Do not use)

a. Specify the kind of business on the basis of the major portion of gross receipts for the year 1935.

Check one:

GENERAL CONTRACTOR: ☐ Building. ☐ Highway. ☐ Heavy construction.

☐ OPERATIVE BUILDER.

SUBCONTRACTOR: (Special Trade Contractor)

- ☐ Air conditioning.
- ☐ Carpentering.
- ☐ Cement gun.
- ☐ Concreting.
- ☐ Electrical.
- ☐ Elevator installation and repair.
- ☐ Excavating and foundation.
- ☐ Heating and piping.
- ☐ Insulation.
- ☐ Lathing.
- ☐ Marble.
- ☐ Mason.
- ☐ Ornamental metal.
- ☐ Painting, paperhanging, and decorating.
- ☐ Plastering.
- ☐ Plumbing.
- ☐ Resilient flooring.
- ☐ Roofing.
- ☐ Sheet metal.
- ☐ Steel erection.
- ☐ Stone setting.
- ☐ Terrazzo and mosaic.
- ☐ Tile and mantel.
- ☐ Wood flooring.
- ☐ Wrecking and demolition.
- ☐ Other ____________ (Specify)
____

b. Subcontractors (*special trade contractors*) doing more than one kind of work are to list the several kinds that they do in the order of their relative importance, according to 1935 gross receipts. (*Use the terms given above.*)

(1) ____________ (2) ____________ (3) ____________

(5) ________________
(6) ________________
(7) ________________
(8) ________________
(CODE—Do not use)

3. CONTRACTS OR ORDERS RECEIVED AND WORK SUBLET:

Operative builders are to answer sections *a* 1 and *b*.

a. Dollar value of all contracts or orders (*new construction, repairs, etc.*) received during the year 1935:

		Key
1. Directly from owners or any source other than contractors (*Operative builders* are to show here the estimated dollar value, when completed, of all projects for which they started construction during 1935.)	$	B–1
2. From other contractors	$	B–2
3. TOTAL (*sum of* 1 *and* 2)	$	B–3
b. Dollar value of all work sublet during 1935	$	B–4

4. WORK PERFORMED:

Report the dollar value of all work performed or materials supplied by your organization during the year 1935. The amount is to be in terms of contract prices (*not actual costs*) and is to cover only the work actually done, including work performed on partially completed jobs. Do not include the cost to you of work sublet to other contractors.

TYPE OF CONSTRUCTION	ITEM	TOTAL (1)	NEW CONSTRUCTION AND ADDITIONS		REMODELING, REPAIRS, AND MAINTENANCE	
			Private Construction (Projects owned by individuals, corporations, and all other private agencies) (2)	**Public Construction** (Projects owned by Federal, State county, municipal, or other governmental agencies) (3)	**Private Construction** (As defined in col. 2) (4)	**Public Construction** (As defined in col. 3) (5)
ONE- AND TWO-FAMILY HOUSES (*even if part of a larger project of some other type*)	C(1)	$	$	$	$	$
OTHER RESIDENTIAL BUILDING (*even if part of a larger project of some other type*)	C(2)	$	$	$	$	$
BUILDING OTHER THAN RESIDENTIAL (*even if part of a project of some other type*)	C(3)	$	$	$	$	$
HEAVY CONSTRUCTION [1] (*as defined at the end of this Inquiry*)	C(4)	$	$	$	$	$
HIGHWAY [2] (*as defined at the end of this Inquiry*)	C(5)	$	$	$	$	$
TOTALS		$ Key A–1	$	$	$	$

---

[1] HEAVY CONSTRUCTION.—This is for all work regularly done by heavy construction contractors and will include railroad construction projects, heavy construction and railroad bridges, heavy construction sewers and water mains, grade separations involving a railroad, foundations, pile driving, piers, abutments, retaining walls, viaducts, tunnels, subways, elevated highways, track elevation, drainage projects, sanitation projects, aqueducts, irrigation projects, flood-control projects, reclamation projects, reservoirs, water-supply projects, water-power development, hydroelectric development, transmission lines, pipe lines, locks, dams, dikes, levees, revetments, channels, channel cut-offs, intakes, dredging projects, jetties, breakwaters, docks, harbors, industrial sites (excluding paving operations), general excavation.

[2] HIGHWAY CONSTRUCTION.—This is for all work regularly done by highway contractors and will include roads, streets, alleys, sidewalks, guard rails and fences, parkways, parking areas, airports, bridle paths, athletic fields, highway bridges, grade separations involving highways, light construction sewage and waterworks improvements.

5. PROPRIETORS AND FIRM MEMBERS (does not apply to corporations):

		Key
a. Total number of proprietors and firm members (*including those reported under b, below*)		B–5
b. Number of proprietors and firm members devoting the major portion of their time to the business		A–2 B–6
c. Number of members of families of proprietors or firm members who are regularly working, full-time or part-time, in the business but to whom no stated salary is paid		B–7

31498

6. PAID EMPLOYEES AND WEEKLY PAY ROLL:

(Do not include persons reported under Inquiry 5.)

	Number of employees	Key	Total pay roll (*salaries, wages, bonuses, and commissions*)	Key
a. Number of employees and amount of pay roll for the one-week pay period ending nearest October 26, 1935.				
1. Salaried officers of the corporation (*do not include proprietors and firm members of unincorporated establishments*)		D–1	$	D–2
2. Construction engineers, superintendents, any foremen whose duties are primarily supervisory, and other responsible administrative and technical employees		D–3	$	D–4
3. All other salaried employees, including the field office force, salesmen, estimators, draftsmen, clerical workers		D–5	$	D–6
4. Wage earners employed at the site of construction, including foremen and gang bosses the greater part of whose work is similar to that of the men under their supervision		D–7	$	D–8
5. All other wage earners			$	
6. TOTAL (*sum of* 1, 2, 3, 4, *and* 5)		A–3	$	D–9
7. How many of the total paid employees shown in 6 above are Negroes?		B–8	x x x x x x	

		Key
b. Total pay roll for the year 1935 for full-time and part-time employees (*salaries, wages, bonuses, and commissions*). (*Do not include proprietor's or partners' compensation, but include that of officers of corporation*)	$	A–4

c. Number of employees working during pay period ending nearest the 15th of each month of 1935:

MONTH	FIELD	TOTAL NUMBER OF PAID EMPLOYEES (*as defined under a6*)	WAGE EARNERS AT THE SITE OF CONSTRUCTION	MONTH	TOTAL NUMBER OF PAID EMPLOYEES (*as defined under a6*)	WAGE EARNERS AT THE SITE OF CONSTRUCTION
		Item E (1)	Item E (3)		Item E (2)	Item E (4)
January	1			July		
February	2			August		
March	3			September		
April	4			October		
May	5			November		
June	6			December		

		Key
(Do not use)		A–5

7. WORK PERFORMED IN 1935 BY LOCATION:

Report the dollar value of the construction work performed by you for all types of construction combined.

			Key
a. In the city (*or its immediate environs*) in which your office is located		$	F–1
b. In the State in which this office or branch is located, excluding 7*a*		$	F–2
c. In other States (*list each State separately*):			
Name of State	$		
	$		
	$		
	$		
Total of all entries under *c*		$	F–3
d. Total amount of work performed for all locations combined (*should agree with total of column 1 of Inquiry 4*)		$	

8. MAN-HOURS AND PAY ROLL AT SITE OF CONSTRUCTION:

Show the number of man-hours worked and the amount of the pay roll **for all pay periods in each month** of 1935 **for wage** earners employed at the site of construction.

MONTH	FIELD	AMOUNT OF PAY ROLL	NUMBER OF MAN-HOURS	MONTH	AMOUNT OF PAY ROLL	NUMBER OF MAN-HOURS
		Item G (1)	**Item G (3)**		**Item G (2)**	**Item G (4)**
January	1	$		July	$	
February	2	$		August	$	
March	3	$		September	$	
April	4	$		October	$	
May	5	$		November	$	
June	6	$		December	$	
				(Do not use)		

9. MATERIALS USED AND BUILDING EQUIPMENT INSTALLED:

Report the total cost delivered on the job of all materials that you furnished and used in construction (*brick, cement, lumber, steel, and all other materials*) and of all equipment furnished by you and installed (*plumbing, heating, and electrical apparatus, elevators, and all other equipment incidental to the building*). Do not include equipment which the building serves to house (*factory machinery, power-generating equipment, and similar items*) or material and equipment furnished by your subcontractors.

		Key
Total cost of materials and equipment installed during 1935	$	A–6

10. SUPPLEMENTAL FACTS:

		Key
a. If any merchandise was sold independently of contract work, show the net sales for 1935. (*Do not include the value of materials reported under Inquiry 9.*)	$	B–9

b. Report here all work of the following classes on which contracts or orders were received or construction started during 1935 (*this does not apply to subcontractors*):	NUMBER OF STRUCTURES		NUMBER OF FAMILY UNITS	
		Key		Key
1. One- and two-family houses		F–4		F–5
2. Other residential structures		F–6		F–7

EMPLOYMENT BY MONTHS, AND BY OCCUPATIONAL GROUPS BY STATES AND CITIES, AND BY KIND OF BUSINESS

February, 1937

UNITED STATES DEPARTMENT OF COMMERCE

Daniel C. Roper, Secretary

BUREAU OF THE CENSUS

William L. Austin, Director

CENSUS OF BUSINESS: 1935

Fred A. Gosnell, Chief Statistician
William A. Ruff, Assistant

This is the second of a series of three volumes to summarize data for the Construction Industry, as reported by general contractors, operative builders and special trade contractors. In this volume detailed data are presented for personnel, pay rolls and man-hours. The study of the Construction Industry was part of the Census of Business, 1935.

The statistics were collected in 1936 by a canvass of contracting establishments in every State, city and county of the United States, by the Bureau of the Census, with funds provided by the Works Progress Administration.

Construction reports are prepared under the supervision of George J. Lawrence, Chief, Construction Census, with the assistance of Luther J. Etchison.

US Bureau of the Census
March 24, 1937.

CONSTRUCTION INDUSTRY: 1935

ARRANGEMENT AND CONTENTS OF VOLUMES

The data collected for the operations of construction establishments are presented in three volumes. Each volume contains a series of tables showing statistics for the United States, each geographic division, each State and each city of 500,000 or more inhabitants. The data for each table, except for some United States Summaries are shown by kind of business, or by kind-of-business groups.

VOLUME I – Shows the number of establishments, work performed, personnel, pay roll, and cost of materials.

VOLUME II – Shows detailed data for personnel, pay roll, and man-hours.

VOLUME III – Shows work performed, by type of construction (one- and two-family houses, other residential building, etc.); work performed, by the location of the work; comparative figures for 1929 and 1935; a size grouping of establishments, by value of work performed; and other data showing the characteristics of construction establishments.

SPECIAL SUBJECT REPORTS – Show the results of the analysis of various aspects of construction by contractors.

CONSTRUCTION INDUSTRY: 1935

CONSTRUCTION INDUSTRY: 1935

SECTION I

SCOPE, CLASSIFICATIONS AND DEFINITIONS

Volume I of this series of reports contains certain basic data for the contracting branch of the construction industry. In the present volume information for total employees, wage earners at the site and their pay rolls and man-hours is summarized in considerable detail, for the primary purposes of showing (1) monthly changes in employment during the year, and (2) the distribution of employment by broad occupational groups.

REPORT FORMS SUMMARIZED IN THIS VOLUME

All data summarized in this volume are from Form 60 of the field canvass.

In Volume I, it was explained that three report forms were used for the collection of statistics from contracting establishments. One of these forms was used for a mail canvass and the other two for a field canvass. Information for employment was not requested on the mail canvass form. Of the field canvass forms, the short form was used mainly by small establishments (the average amount of work performed per establishment in this group is $5,420). In many cases the small establishments had no employees. For all establishments reporting on the short form, including those that reported employment as well as those that did not report employment, there is an average of 1.28 employees per establishment for the year 1935.

LIMITATIONS OF THE CANVASS

A mail canvass was made to supplement the one conducted in the field. To the report forms sent by mail, a 25% response was received. Among these were replies of many large establishments for which construction schedules had not been received from the field canvass. From this it seems reasonable to assume that among the 75% of the establishments that did not respond to the mail canvass, were many that had not been covered by the field canvass.

CLASSIFICATION BY KIND OF BUSINESS

The information utilized in this study was secured by a nationwide canvass of establishments representing nearly every kind of business activity - retail trade, wholesale trade, contractors engaged in construction, etc. For ready reference, some of the more important parts of the procedure utilized in the classification of establishments by kind of business are repeated here.

Each establishment was reported in the *one* field of business activity that was of greatest importance as measured by gross receipts. This was true with the exception of establishments engaged in both real estate and construction. For such establishments real estate and construction activities were reported and tabulated separately. Of other types of establishments commonly engaged in two or more kinds of business, those doing electrical, heating, plumbing and sheet metal work are probably the most important as far as construction is concerned. These are classed as construction only if receipts from this source are greater than those from retail trade, wholesale trade, service, or any other field covered by the Census of Business.

Contracting Establishments. - The principle of classifying an establishment in accordance with the major portion of gross receipts was followed in allocating reports of contracting establishments to specific kinds of business in this field.

DEFINITION OF TERMS

Certain terms in both the text and tables of this volume are to be interpreted in accordance with the following definitions:

Establishments. - Establishments whose principal business is performing construction work for others, or that are places of business of operative builders, are classed as construction establishments.

A construction establishment is a place in or from which are conducted the estimating, bidding, selling, and other central or branch office activities relating to construction. The report of the establishment covers, in addition to the above, operations at the site of construction (including field or job offices maintained at the site) as well as those at yards operated by the establishment for the storage and repair of equipment.

The establishment may be:

1. An office of a contractor or operative builder. In some cases, the office activities are conducted from residences.

2. A store or shop engaged in retail selling, service, or manufacturing work but whose 1935 gross receipts from construction exceeded those from retail trade, service, manufacturing, or other operations.

3. A real estate establishment that does construction work with its own forces. Included here are only the construction operations of such establishments.

General Contractor. - This term designates an establishment whose major business consists of contracting with the owner (or his agent) for the entire work on a given construction project, being responsible for the execution of the whole, and usually doing some portion of the actual work with its own forces.

General Contractors - Building. - This designates general contracting establishments most of whose work during 1935 consisted of the construction of buildings.

General Contractors - Highway. - This designates general contracting establishments most of whose work during 1935 consisted of highway construction. Highway construction is all work regularly done by highway contractors, and includes roads, streets, alleys, sidewalks, guard rails and fences, parkways, parking areas, airports, bridle paths, athletic fields, highway bridges, grade separations involving highways, light construction sewerage and waterworks improvements.

General Contractors - Heavy. - This designates general contracting establishments most of whose work during 1935 consisted of heavy construction. Heavy construction is all work regularly done by heavy construction contractors, and includes such items as railroad construction projects; heavy construction bridges, sewers and watermains; tunnels; drainage projects; sanitation projects; flood control projects; water supply projects; dredging.

Operative Builders. - An operative builder is the owner as well as the builder of construction projects. As far as the actual construction work is concerned, he performs the functions of a general contractor, that is: he has the responsibility of the entire project, usually does some part of the work with his own forces and sublets the remainder. Speculative builders, owner-builders and development companies are included with operative builders.

Special Trade Contractors. - This term designates establishments engaged in specialized lines of work. Some of this work is performed under sub-contract for a general contractor, and some is done directly for the owner.

The report form lists twenty-six kind-of-business classifications for special trade contractors, including the classification for "other". An analysis of the reports received for air conditioning, cement gun, and several other kinds of business showed that they were too few in number to publish as separate items. At this time it was also found desirable to show certain combined kinds of business as separate items. The result was that twenty-four kind-of-business groups were established for special trade contractors. These are shown in the United States Summary Table 1, Page 1.

Work Performed. - This is the total value of construction performed during the year by the reporting establishments. Total work performed includes all of the construction activities of the establishment in connection with new and repair, and private and public work. It is in terms of contract or order prices; not actual cost. (The figure for work performed by operative builders represents the work actually completed and is expressed in terms of the value of the project.) Work performed covers, however, only the work actually done, including that for partially completed jobs.

In the case of establishments engaged in two or more fields of business, the figures for work performed apply only to the construction work; receipts from all other sources being excluded.

Active Proprietors and Firm Members. - This class includes those devoting the major portion of their time to the business of the establishment. Salaried corporate officers, and executives of corporations are not classed as proprietors. It should be noted that in the case of small establishments, proprietors may be engaged in productive work.

Employees. - Figures for employees represent the aggregate number, both full-time and part-time. Separate figures were not obtained for full-time and part-time employees. These would be of little value because of the wide-spread practice of employing workers for specific construction projects. "Employees" includes salaried officers of corporations, salaried office workers, wage earners who work at the site of construction, and all other paid employees, but does not include proprietors and firm members of unincorporated establishments.

Employees (average for the year). - The average for the year was computed in the following manner. Each individual report shows the total number of employees working during the pay period ending nearest the fifteenth of each month, or the average number of employees for the year. These figures were added by kind-of-business groups to arrive at the number of man-months of employment. One-twelfth of this figure is shown as the average number of employees for the year.

Administrative and Technical Employees. - This class includes construction engineers, superintendents, any foremen whose duties are primarily supervisory, and other responsible administrative and technical employees.

All Other Salaried Employees. - This class includes the field office force, salesmen, estimaters, draftsmen, and clerical workers.

Wage Earners Employed at the Site of Construction. - This class includes skilled labor, helpers, apprentices and common labor. Included here also are foremen and gang bosses, the greater part of whose work is similar to that of the men under their supervision.

All Other Wage Earners. - This class includes wage earners other than those at the site of construction.

Pay Roll. - This represents the total amount of salary, wage, bonus and commission payments to employees. Pay roll does not include proprietors' or partners' compensation.

Man-Hours. - Figures for man-hours represent the total number of hours worked by all wage earners employed at the site of construction.

SECTION II

GENERAL ANALYSIS OF EMPLOYMENT

INTRODUCTION

The statistics compiled periodically by a number of agencies show that there are large fluctuations in the amount of construction, both from year to year, and for the months of a year. Because construction is a far-flung industry with many ramifications, it must of necessity be influenced by changes in general business conditions. In addition to this, other causes of fluctuations are to be found in such conditions as the influence of weather on certain construction operations, and the availability of labor for construction work at different seasons of the year. It is to be expected that marked changes in the amount of construction work are accompanied by similar changes in employment. Because instability is not confined only to periods of business depression, but is a characteristic of construction operations, factual data for employment are important. Furthermore, the condition of great instability of employment gives rise to some of the major problems of the construction industry.

Information for employment by the contracting branch of the construction industry is both fragmentary and incomplete. The purpose of this volume is to fill in some of the gaps in the existing data for this subject. To this end, figures are shown in considerable detail by kind of contracting business, and by States and cities. The figures fall into two general groups. One shows employment by months, the other shows employment by occupational classes.

Different Forms Used for Reporting. - Of the three report forms used in this study of construction by contracting establishments, employment information is shown only by the two used for the field canvass. Reports on these forms were received from 69,838 establishments, and these have 409,137 as the average number of employees for the year. The summary below shows by report forms the number of establishments reporting, the dollar value of work performed and the average number of employees for the year.

	Number of establishments	Dollar value of work performed	Employees (average for the year)
Total for all forms	75,047	$1,622,862,000	
Field canvass	69,838	1,457,710,000	409,137
Form 60	46,429	1,330,835,000	379,067
Short form	23,409	126,875,000	30,070
Form for mail canvass	5,209	165,152,000	No data

Information for employment as presented in the detailed tables of this volume is, for the reasons previously stated, based only on reports on field canvass Form 60. It is to be noted that certain establishments reported the average number of employees for the year, but did not report other detailed information for employment. The result of this is that the detailed information for employment as summarized here is for but part of the total number of reporting establishments. Tables 1 and 2 presenting data for all reporting establishments, and which appeared in detail in Volume I, are shown in summary form on Pages 1 to 4 of Volume II for convenience in reference.

Establishments Reporting Employment. - In the case of each establishment reporting on Form 60 and which had employees, figures were shown for the year for total salary and wage payments, and for the average number of employees. It should be noted that in addition to this information, there were inquiries for three detailed aspects of employment as follows:

1. Total number of employees for pay periods ending nearest the 15th of each month.

2. Data for wage earners at the site of construction.

3. Employment by occupational groups.

Not every establishment reporting on Form 60 and having employees answered all of these employment inquiries. In some cases, none of the detailed inquiries were answered. In other cases, information was furnished only for one or two of the inquiries. This condition made it necessary to determine whether the detailed employment information should be summarized in total or just for the establishments that reported all of it. To have decided upon the latter course was not desirable because it would have made the information for certain aspects of employment less complete. Instead, it was decided to summarize all of the information available for each of the detailed employment inquiries, and to show also for each group of establishments data for the dollar value of work performed, and the average number of total employees for the year. (The average number of total employees for the year is not shown for establishments reporting data for wage earners at the site.) The figures for work performed and for the average number of total employees for the year afford a ready means for comparing the establishments reporting in any category with the entire number that reported, and for which figures are summarized in Table 1, Pages 1 and 2. Table A summarizes information by establishments grouped by the class of employment data reported. The figures in this table are United States totals for all kinds of business combined.

TABLE A. - ESTABLISHMENTS GROUPED BY CLASS OF EMPLOYMENT DATA REPORTED

	Number of establishments	Work performed			Employees (average for the year)		
		Amount (Add 000)	Amount per establishment	% total Form 60	Number	Number per establishment	% total Form 60
All establishments reporting on Form 60	46,429	$1,330,835	$28,663	100.0	379,067	-	100.0
Total employment by months							
Establishments reporting	31,543	1,149,561	36,444	86.4	329,421	10.44	86.9
Establishments not reporting*	14,886	181,274	12,177	13.6	49,646	3.34	13.1
Wage earners at the site							
Establishments reporting	15,470	733,105	47,388	55.1	No data		
Establishments not reporting*	30,959	597,730	19,307	44.9	No data		
Employment by occupations							
Establishments reporting	25,923	1,054,291	40,670	79.2	302,667	11.68	79.8
Establishments not reporting*	20,506	276,544	13,486	20.8	76,400	3.73	20.2

* Including establishments having no employees.

EMPLOYMENT BY MONTHS

Tables 4, 5 and 6 starting on Page 1 present four sets of figures for employment by months, as follows:

1. Total number of paid employees working during the pay period ending nearest the 15th of each month.

2. Number of wage earners at the site of construction during the pay period ending nearest the 15th of each month.

3. Amount of pay roll for all pay periods in each month of 1935 for wage earners at the site of construction.

4. Number of man-hours worked for all pay periods in each month of 1935 by wage earners employed at the site of construction.

Each of these sets of figures is in detail by kind of business, and by States and Geographic Divisions. In the following pages general consideration is given such matters as, how employment varies as measured by each of the four series of figures, what differences there are in the monthly changes in employment by kind of business, and what differences there are in the monthly employment figures for different parts of the country. These points are covered in the following pages by way of explaining the nature of the statistical data presented in this volume, and not for the purpose of making a thorough analysis of the data.

Total Number of Employees by Months. - Figures for the total number of paid employees working during the pay period ending nearest the 15th of each month are shown in Table 4, Page 7. This information was reported by a total of 31,543 contracting establishments in the United States. 14,886 other contracting establishments reported on Construction Schedule, Form 60, but did not show total employment by months. The establishments not reporting total employment by months had 13.1% of the employees reported by all establishments (See Table A).

From Table 4, it is seen that of the pay periods ending nearest the 15th of each month during 1935, the 31,543 establishments had the smallest number of employees for the pay period ending nearest February 15th, and the larger number for the pay period ending nearest August 15th. There were 224,158 employees for the former period, and 401,494 for the latter one. This represents an increase of 79% between the two periods.

Method of Measuring Fluctuations in Employment. - Table B and other tables appearing in the text of this volume present the figures for employment for each month of the year as percentages of the average for the year. This is done with the belief that the fluctuations in employment can be more readily visualized from the percentages than from the original figures. If employment for a month is the same as the average for the year, a figure of 100% is obtained for the month. The extent to which the percentages differ from 100% measures the magnitude in variations in employment from the average for the year. In this connection, it should be noted that if there had been the same number of employees each month, a figure of 100% would have been obtained for each month. The percentages will be particularly useful for comparing fluctuations for one series of figures with those for another.

For the purpose of comparing the relative magnitudes of the monthly fluctuations for two or more series of monthly figures, use is made of the mean deviation. This is computed by first expressing the figures for employment for each month of the year as percentages of the average for the year. The difference between each of these monthly figures and 100% is then secured. The figures for the differences for the twelve months are added without regard to their algebraical signs, and their total is divided by twelve giving the mean deviation. Stated in other words, it may be said that the mean deviation is the arithmetic mean of the deviations of the monthly percentages from 100%.

The purpose of employing the mean deviation is that it is thereby possible to show by a single figure the average amount of the fluctuations for a series of figures. The magnitude of the value that is obtained for the mean deviation measures that of the average fluctuations of the series, the larger the mean deviation, the greater the fluctuations.

Fluctuations in Total Number of Employees by Months. - A more detailed picture of the manner in which employment changed for the pay periods ending nearest the 15th of each month of the year 1935 is shown by the figures in Table B. This table shows, for the United States by kinds of business, the average number of employees for the year, and the number of employees for the pay period ending nearest the 15th of each month as percentages of the average number of employees for the year. The lowest and the highest percentage values for each kind of business are underlined. From the figures underlined it is seen that for most of the kinds of business, February was the lowest month of employment and October the highest month.

From Table B it will be noted that fluctuations in employment were not the same for each kind of contracting business. They are considerably more pronounced for general contractors than for special trade contractors. In the case of establishments in the former group, employment ranged from a low of 62.8% in February to a high of 126.8% in August. The amounts for special trade contractors ranged from 78.5% in February to 117.2% in October. The increase from the lowest amount to the highest one is 102% for the general contractors, and 49.3% for the special trade contractors. It is also to be noted that the figures for establishments of general contractors show larger month-to-month changes than do those for special trade contractors. This condition will be apparent from the two curves of Chart 1.

CONSTRUCTION INDUSTRY: 1935

TABLE B.-TOTAL NUMBER OF EMPLOYEES FOR THE PAY PERIOD ENDING NEAREST THE 15th OF EACH MONTH AS PERCENTAGES OF THE AVERAGE NUMBER OF EMPLOYEES FOR THE YEAR

Kind of business	Number of Employees (Average for year)	Number of employees for the pay period ending nearest the 15th of each month as percents of the average number of employees for the year												Mean deviation
		Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.

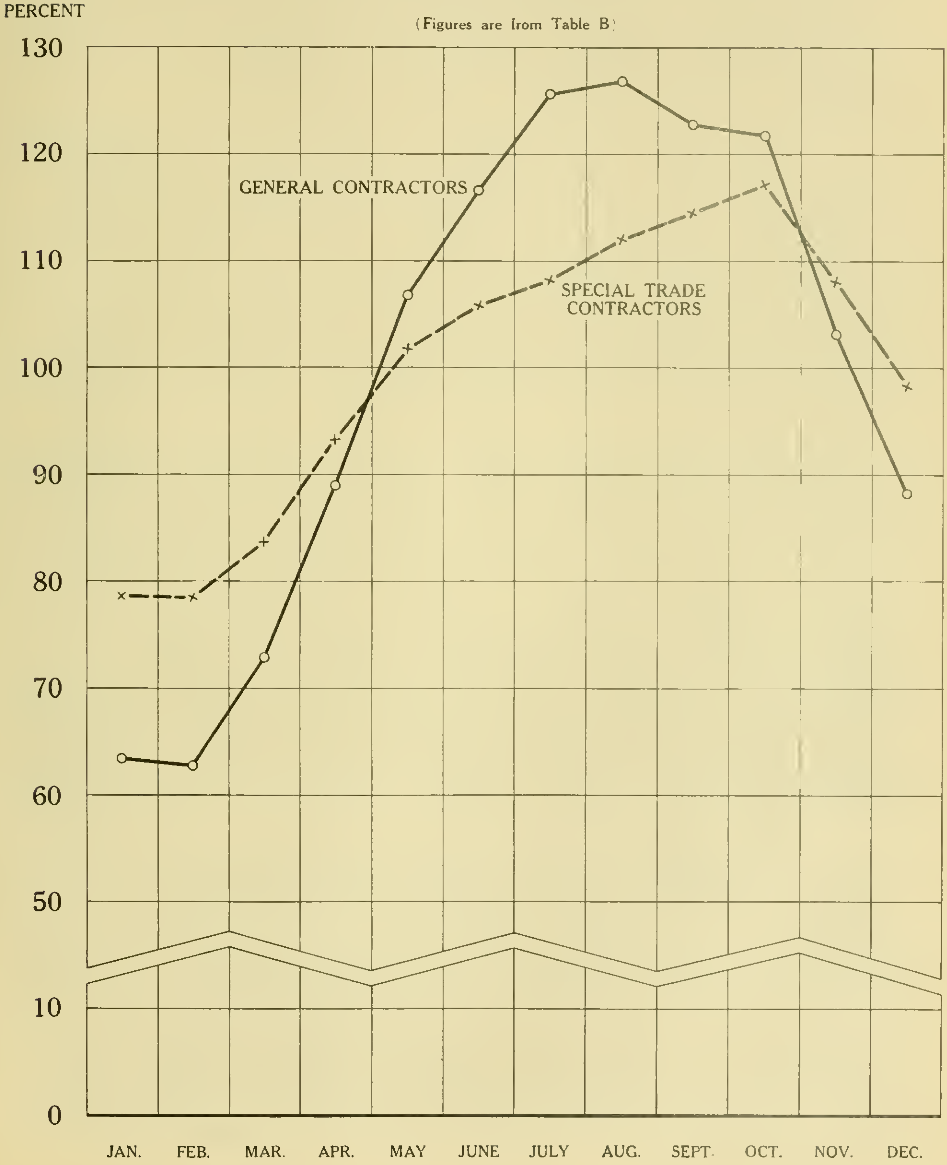
1/ Includes Operative Builders.

CHART 1 - NUMBER OF TOTAL EMPLOYEES THE 15th OF EACH MONTH AS PERCENTAGES OF AVERAGE NUMBER FOR THE YEAR

(Figures are from Table B)



BUREAU OF THE CENSUS

The operations of general contractors engaged in highway construction work are perhaps influenced as much by the weather as are the operations of any of the kinds of business listed in Table B. It is to be noted also that the greatest variation in employment is shown by general contractors engaged in highway construction, with amounts ranging from 48.0% for January to 147.5% for July. In other words, there were about three times as many employees for July as there were for February.

As previously noted, employment for special trade contractors shows less variation than that of general contractors. In comparison with the operations of general contractors, those of special trade contractors are not only affected to a smaller extent by the weather but also include a relatively larger proportion of remodeling, repair and maintenance work. It is possible for the special trade contractors to occupy themselves with such work when there is little or no new construction and to secure in this way, more uniform employment throughout the year. Remodeling, repairs, and maintenance accounted for 13.9% of the total work of general contractors, and 50.7% of the work of special trade contractors (See Volume I, Page XXXVI).

The mean deviations in the last column of Table B afford a ready means for comparing the relative magnitude of fluctuations in employment by kind of business. It is to be remembered that the value of the mean deviation increases with the magnitude of the fluctuations. The largest fluctuations on the basis of these figures, as in the case of the percentage presented in an earlier paragraph, occur for general contractors engaged in highway construction. The mean deviations also show that the fluctuations for the special trade contractor group are less than those for general contractors. With further reference to the special trade contractors, however, it is seen that there are wide differences in the extent of the fluctuations in employment for the individual kinds of business comprising this group. The largest fluctuations occurred for excavating and/or foundation, and the smallest ones for glass and glazing. The mean deviation for the former is 25.2 and for the latter 3.4.

Total Number of Employees by Geographic Divisions. — In the preceding paragraphs it has been pointed out that employment varies by kind of business. It is to be expected that it also varies for different parts of the United States. That this is the case is evident from the figures of Table C showing the total number of employees for the pay period ending nearest the 15th of each month as percentages of the average number of employees for the year. The figures are shown for two geographic divisions by four kind-of-business groups. The geographic divisions were selected so that one would be composed of northern States and the other of southern States. The former is the East North Central division including Illinois, Indiana, Michigan, Ohio and Wisconsin. The latter is the West South Central Division including Arkansas, Louisiana, Oklahoma and Texas.

TABLE C. - TOTAL NUMBER OF EMPLOYEES FOR THE PAY PERIOD ENDING NEAREST THE 15th OF EACH MONTH AS PERCENTAGES OF THE AVERAGE NUMBER OF EMPLOYEES FOR THE YEAR

	General Contractors						Special trade contractors	
	Building		Highway		Heavy			
	East North Central	West South Central	East North Central	West South Central	East North Central	West South Central	East North Central	West South Central
January	62.8	59.8	27.4	69.4	64.7	75.0	76.5	83.5
February	64.8	63.5	27.5	69.0	62.3	76.0	74.8	84.7
March	71.2	70.4	37.1	85.1	72.3	84.0	80.1	92.1
April	86.7	75.4	62.4	98.6	84.7	101.8	91.8	97.0
May	99.8	82.7	106.6	101.8	99.8	93.1	102.4	98.1
June	104.4	106.3	148.7	106.2	106.6	106.3	108.1	101.8
July	121.9	132.0	175.6	128.1	120.7	88.6	110.4	106.8
August	126.9	146.8	161.6	136.5	121.8	106.1	114.0	105.6
September	131.1	122.2	155.5	117.6	124.1	115.0	118.8	107.3
October	122.7	116.4	143.9	104.1	125.7	127.7	119.9	110.4
November	109.4	110.4	92.0	91.8	117.6	118.3	107.7	108.5
December	98.3	114.1	61.7	91.8	99.7	108.1	95.5	104.2
Average number of employees for the year	18,785	4,760	13,729	7,157	11,941	4,986	22,882	4,101

From Table C a matter previously mentioned is apparent, namely: monthly employment changes are not the same for each kind of business. In the case of the East North Central division, for example, it is found that the number of employees for the pay period ending nearest January 15th, expressed as a percentage of the average number of employees for the year is 62.8% for general contractors engaged in building, 27.4% for general contractors engaged in highway construction, 64.7% for general contractors engaged in heavy construction, and 76.5% for special trade contractors. It is also to be noted that the relative number of employees in each kind-of-business group is not the same for each geographic division. Of the total establishments for all kinds of business, special trade contractors represent 34.0% for the East North Central division, and 19.5% for the West South Central division. Because of variations in employment by kind of business, and because of differences in the relative importance of the kinds of business by geographic divisions, the comparisons of employment by geographic divisions are made by kind-of-business groups.

For each of the four kind-of-business groups except general contractors engaged in building, monthly changes in employment fluctuate to a greater extent in the case of the East North Central division than in the case of the West South Central division. Employment for the winter months is considerably lower for the East North Central division than for the West South Central division. For the other months of the year, employment is considerably higher for the East North Central division than for the West South Central division.

The extent of the fluctuations in employment by kind-of-business groups for each of the nine geographic divisions is shown by the mean deviations in Table D. For each kind-of-business group, it is to be noted that, with but few exceptions, the fluctuations in employment for those geographic divisions composed mainly of northern States are greater than for those geographic divisions composed mainly of southern States. The main exceptions to this are the large mean deviations for general contractors engaged in building for the West South Central States and for general contractors engaged in heavy construction for the East South Central States, and the low mean deviation for general contractors engaged in heavy construction for the East North Central States.

TABLE D. - FLUCTUATIONS IN EMPLOYMENT BY GEOGRAPHIC DIVISIONS

"Employees" represents average number for the year
M. D. is the mean deviation

	General contractors						Special trade contractors	
	Building		Highway		Heavy

East North Central	18,785	19.4	13,729	48.7	11,941	11.1	22,882	13.6
West North Central	7,543	14.2	13,630	42.3	8,924	19.1	9,460	14.8
South Atlantic	13,116	12.5	9,099	20.1	4,782	5.5	11,622	9.7
East South Central	3,431	12.6	5,506	20.8	1,468	24.7	3,750	10.3
West South Central	4,760	24.7	7,157	15.7	4,986	13.9	4,101	7.4
Mountain	1,495	28.0	5,133	19.0	2,252	33.9	1,934	14.2
Pacific	8,993	13.8	8,233	21.1	11,370	11.6	10,723	9.0

It is to be emphasized that all data contained in this volume for location are by the location of the reporting establishment and that this might differ from the location of the construction work done by the establishments. This might particularly affect the interpretation of employment data by location, because the greater part of the employees of contracting establishments are wage earners at the site of construction.

Number of Wage Earners at the Site of Construction. - Of the total of 46,429 establishments that reported on Construction Schedule, Form 60, the number of wage earners at the site of construction during the pay period ending nearest the 15th of each month of the year, 1935, is summarized for 15,470 establishments. The smaller number of establishments in this class is due, in part, to the fact that figures for the number of wage earners at the site were not utilized unless data were also shown by the establishment for pay rolls and man-hours: figures that were in many cases not reported. Nevertheless, the 15,470 establishments that reported monthly data for wage earners at the site performed work amounting to $733,105,000, or 55.1% of the work performed by all establishments that reported on Construction Schedule, Form 60. Hence, data for wage earners at the site are available for about half of the construction work that was done by the total number of reporting establishments.

According to the information available for occupational groups relating to one week in October (See Page XXIX) wage earners at the site of construction represent 88% of the number of the total employees of contracting establishments. Because wage earners at the site of construction are such a large part of the total number of employees, the statements that have been made about the distribution of employment by months of the year by kind of business, and by location of contracting establishments, all in terms of the total number of employees, can be expected to be also true for the data for wage earners at the site. That the monthly distribution of total employees, and of wage earners at the site is about the same in terms of data for all kinds of contracting business combined for all reporting establishments in the United States is evident from the figures in Table E. The figures for the total number of employees were reported by 31,543 establishments, and those for wage earners at the site by 15,470 establishments.

TABLE E. - NUMBER OF TOTAL EMPLOYEES, AND NUMBER OF WAGE EARNERS AT THE SITE ON THE 15th OF THE MONTH AS PERCENTAGES OF AVERAGE NUMBER FOR THE YEAR

	Total number of employees the 15th of the month				Wage earners at the site the 15th of the month

Average number of employees for the year	87,344	74,980	57,571	109,526	49,689	47,160	37,908	53,702

Pay Rolls and Man-Hours by Months. - Table 6 shows the total amount of pay roll, and the number of man-hours worked for all pay periods in each month of 1935, for wage earners employed at the site of construction. These figures are for the same establishments that reported the number of wage earners working at the site of construction during the pay period ending nearest the 15th of each month of 1935. We therefore have, for the same reporting establishments, three sets of monthly figures for employment for wage earners at the site of construction as follows:

1. Number of wage earners working during the pay period ending nearest the 15th of each month.

2. Pay roll for all pay periods in the month.

3. Man-hours worked during all pay periods in the month.

Table F summarizes this information by months for the 15,470 contracting establishments in the United States that reported each of the three items.

The changes in monthly employment as shown by one of these sets of figures cannot be compared with the changes as shown by another set without taking into account the differences in the make-up of the figures in each set. In the case of pay rolls and man-hours, the figures cover all pay periods in the month. Because there are not the same number of pay periods in each month, the figures for pay rolls and for man-hours reflect differences both in the number of pay periods as well as in the intensity of seasonal employment. It is to be recognized also that average hourly earnings vary considerably by trades and for different parts of the country. Hence, the figures for the monthly distribution of employment in terms of pay rolls show the combined effect of changes in employment and changes in proportions of persons employed with different hourly earnings. The fact that very nearly the same results for monthly variations in employment are shown by the pay roll and man-hour figures in Table F does not signify that the foregoing considerations are unimportant. The figures in this table are for reporting establishments for all parts of the United States, and for all kinds of business combined. There is the possibility that in this broad comparison some factors offset others. If the comparison were made for a single State, or for one kind of business, certain of these factors might have a more pronounced effect.

The figures for the number of wage earners are for the pay period ending nearest the 15th of each month. In the case of these figures, one pay period is covered in each month. There is no assurance, however, that the figures for a single pay period in the month adequately represent employment during the month because of the rapidity with which changes in employment are made in the case of contracting establishments. It is also to be noted that the figures for the number of employees do not account for the length of time worked by them. An employee who works for but part of the pay period is counted to the same extent as an employee who works throughout the entire pay period.

Monthly employment as measured by the number of wage earners for the pay period ending nearest the 15th of each month shows several points of difference from the monthly figures for pay rolls and man-hours. Each of the three sets of figures are in definite agreement, however, in showing that the fluctuations in monthly employment are large, and in general agreement with respect to the relative amount of employment for each of the months of 1935.

TABLE F. - WAGE EARNERS AT THE SITE OF CONSTRUCTION REPORTED BY 15,470 ESTABLISHMENTS

	Wage earners the 15th of the month		Pay roll for all pay periods in the month		Man-hours for all pay periods in the month	
	Number	% of average	Amount (Add 000)	% of average	Number (Add 000)	% of average
January	123,993	65.8	10,132	61.9	14,097	60.9

WAGE PAYMENTS

Figures for the number of employees, pay rolls, and man-hours have been considered in connection with changes in employment for each of the months of 1935. At this point it may be asked to what extent these figures can be utilized for arriving at average annual or hourly wage payments.

Average Annual Wage Payments. - The figures for the year for the average number of wage earners, and for pay rolls cannot be used for computing the average annual wage earnings of the individual workers. This is because the figures were secured on an establishment basis, and not in terms of the individual employees. It is usual for a construction worker to be employed by several different contractors in the course of a year. Furthermore, many of the workers are not likely to have employment in the industry for all of the working days in the year. As parts of a construction project are completed, men are separated from the pay roll and look for new employment. The result of these changes is that the figures reported by a contracting establishment are likely to include certain individuals for some periods of the year, and other individuals for other periods of the year. In view of this, dividing the total pay roll by the average number of persons employed would represent the average payment per job filled by the contracting establishments, and not the average annual earnings of individual employees.

Average Hourly Wage Payments. - The figures for pay rolls and man-hours may be used for rough comparisons of average hourly wage payments for States, and for kinds of business. It is to be emphasized, however, that such comparisons must be recognized as being subject to considerable modification. This is because the data presented in this volume are not in sufficiently great detail to account for at least three important factors that affect average hourly wage payments. These factors are as follows:

(1) The figures shown here for wage earners at the site of construction include skilled laborers, helpers, apprentices, and common laborers. There is known to be considerable variation in the average hourly wage payments for each of these classes of workers, but separate figures are not presented here by classes.

(2) Hourly rates of pay in the construction industry are established locally, as well as by trades and by classes of employees in a trade. The rates for one city might differ considerably from those for another, even though both cities are in the same State. Furthermore, the rates for the larger cities of a State are likely to be quite different from those of the smaller towns and cities which, in turn, are also likely to differ from those of the rural districts. The significance of these considerations is evident from the data summarized in Table G for certain cities, and for the State exclusive of the largest city in the State. The particular States used in this table were selected because they contained a city that had 500,000 or more inhabitants, and had no other cities that were very large. The figures are shown for three kinds of business for which a fairly large number of reports were received.

By referring to Table G it will be noted that of the cities of Los Angeles and San Francisco in the State of California, the latter city shows average hourly wage payments that are consistently higher than those shown by Los Angeles. It is also to be noted that for

CONSTRUCTION INDUSTRY: 1935

TABLE G. - AVERAGE EARNINGS PER HOUR FOR WAGE EARNERS AT THE SITE, BY KINDS OF BUSINESS, STATES, LARGER CITIES, AND REMAINDER OF STATES

Location #	Electrical			Heating and plumbing group			Painting, paperhanging, and decorating		
	Number of establishments	Employees (average for the year)	Hourly earnings (cents)	Number of establishments	Employees (average for the year)	Hourly earnings (cents)	Number of establishments	Employees (average for the year)	Hourly earnings (cents)

Remainder of State	10	17	66.7	25	81	57.7	23	52	59.8

* No significance can be attached to these figures because of the small number of reports on which they are based.
# Figures are by the location of the reporting establishment which might differ from the location of the work.

Wisconsin a special tabulation is shown for average hourly wage payments for cities with 10,000 to 499,999 inhabitants, and for the remainder of the State exclusive of cities of 10,000 or more inhabitants. From this it is seen that, with the exception of painting, paperhanging and decorating, average earnings per hour are highest for the city of 500,000 or more inhabitants, next highest for other cities of 10,000 or more inhabitants, and lowest for the remainder of the State.

(3) All figures in this volume are shown according to the location of the reporting establishment. This might differ from the location of the construction project on which the employees are working. Because construction employees are paid the rates of the locality in which the work is performed, the data shown by the location of the reporting establishment instead of for the location of the work could introduce errors in the interpretation of the figures for average hourly wage payments.

The foregoing factors are to be kept in mind as likely to result in some modification of the data presented by Table H for Average Hourly Earnings by Kind of Business, and Geographic Divisions, and by Chart 2 showing Average Hourly Earnings by States, by Kind-of-business Groups.

From Table H it is also apparent that average hourly earnings show considerable differences both according to kind of business and the geographic location of the reporting establishment. The same general situation is also to be noted from the State figures presented in Chart 2. In reading the State figures from Chart 2, it is important to note that those for special trade contractors include many different kinds of business which, according to the figures of Table H, show considerable variation. Because certain factors are not accounted for in the presentation of figures for average hourly earnings by States, it is believed that the figures are of limited usefulness as far as the absolute amounts are concerned, and that they can serve at best as only a rough measure for comparing one State with another.

EMPLOYMENT BY OCCUPATIONAL GROUPS

Data for employment by occupational groups were secured for the one-week pay period ending nearest October 26, 1935. The information was requested for one week because it involved a special analysis of the pay roll. To have requested the figures for other pay periods would have imposed upon the reporting establishments more clerical work than many of them could have undertaken. Rather than encounter this condition it seemed preferable to secure the data for a "sample" week of fairly normal activity for the largest possible number of establishments.

In order to have comparable figures for employment by occupations for each of the fields of business activity covered by the Census of Business (construction by contractors, retail trade, wholesale trade, and so on) the same one-week period was used for each field.

* Figures not shown because an average of less than 100 employees was reported

BUREAU OF THE CENSUS

The week of October 26, 1935 was selected as being suitable for this purpose.

Other employment data were secured for one-week pay periods ending nearest the 15th of each month. There would have been some advantage in getting the employment by occupational groups also for the week ending nearest the 15th of the month. The obstacle to doing this was the fact that certain religious holidays affecting larger numbers of employees in some States than in others occurred during the pay period ending October 15, 1935.

Establishments Reporting Employment by Occupations. - From the figures summarized in Table A, Page XIII, it is seen that of the total number of establishments reporting on Construction Schedule, Form 60, the establishments reporting employment by occupational groups accounted for 79.2% of the work performed, and had 79.8% of the employment in terms of average number of employees for the year. Among the 20,506 establishments not reporting employment by occupational groups are many that had no employees. This condition is indicated by the following figures per establishment for the average number of employees for the year:

Establishments reporting employment by occupations	11.68
Establishments not reporting employment by occupations	3.72

Relative Importance of Occupational Groups. - By referring to Table 8 for the United States, Page 153, it will be seen that wage earners at the site of construction represent by far the largest number of employees for each kind of business. It must be remembered that proprietors and firm members are not included in the figures for employees. The number of proprietors and firm members, however, is shown in a separate column of Table 8, and does not materially affect the preponderance of wage earners at the site. For all kinds of business combined, there is a total of 353,965 employees. Of these, 310,957 or 88% are wage earners at the site of construction. The relative number of employees in other occupational groups is summarized for certain classes of contracting establishments in Table J.

TABLE J. - NUMBER OF EMPLOYEES BY OCCUPATIONAL GROUPS FOR THE PAY PERIOD ENDING NEAREST OCTOBER 26, 1935.

Occupational groups	Total	General contractors				Special trade contractors
		Total	Building	Highway	Heavy

EXPLANATION OF TABLES

In the following pages, data for personnel and pay-roll are summarized in five sets of tables as follows:

Table 4 shows the total number of employees that worked during the pay period ending nearest the 15th of each month, the number of establishments reporting employment in this way and the value of work performed by such establishments. The figures are by kind-of-business groups.

Table 5 shows the number of wage earners at the site of construction that worked during the pay period ending nearest the 15th of each month and the number of establishments reporting this information. The figures are by kind-of-business groups.

Table 6 is for wage earners employed at the site of construction and shows, for each month of the year, the total pay roll and number of man-hours. This table also contains figures for the average number of wage earners at the site during the year and for the value of work performed. The figures are shown by kind-of-business groups.

Table 7 contains information similar to that of Table 6, but shows all figures for the year and not by months. Another difference in Table 7 is that all figures are shown by individual kinds-of-business.

Table 8 shows personnel and pay-roll by occupational groups for the week ending October 26, 1935. This table also contains figures for the year for the value of work performed, personnel and pay-roll. The figures are shown by kinds-of-business.

In the case of each set, (except Table 8 which is for the United States and geographic divisions only) the tables appear in the following order:

United States Summary, by Kind of Business

United States Summary, by States

Geographic Divisions, by Kind of Business

States, by Kind of Business

Cities of 500,000 or More Inhabitants,
by Kind of Business.

CONSTRUCTION INDUSTRY: 1935

UNITED STATES SUMMARY

TABLE 4.- TOTAL NUMBER OF PAID EMPLOYEES WORKING DURING THE PAY PERIOD ENDING NEAREST THE 15th OF EACH MONTH, BY KIND-OF-BUSINESS GROUPS.

This table covers only establishments reporting their employment by months. For total employment reported to the Census, see text, Page XII.

BUREAU OF THE CENSUS

William L. Austin, Director

CENSUS OF BUSINESS: 1935

Fred A. Gosnell, Chief Statistician
William A. Ruff, Assistant

This is the third of a series of three volumes to summarize data for the Construction Industry, as reported by general contractors, operative builders, and special trade contractors. In this volume, detailed data are presented for work performed by type of construction (one-and two-family houses, other residential building, etc.); work performed by the location of the work; comparative figures for 1929 and 1935; and other data showing the characteristics of construction establishments. The study of construction was part of the Census of Business, 1935.

The statistics were collected in 1936 by a canvass of contracting establishments in every State, city and county of the United States, by the Bureau of the Census, with funds provided by the Works Progress Administration.

Construction reports are prepared under the supervision of George J. Lawrence, Chief, Construction Census, with the assistance of Luther J. Etchison.

CONSTRUCTION INDUSTRY: 1935

ARRANGEMENT AND CONTENTS OF VOLUMES

The data collected for the operations of construction establishments are presented in three volumes. Each volume contains a series of tables showing statistics for the United States, each geographic division, each State and each city of 500,000 or more inhabitants. The data for each table, except for some United States Summaries are shown by kind of business, or by kind-of-business groups.

VOLUME I - Shows the number of establishments, work performed, personnel, pay roll, and cost of materials.

VOLUME II - Shows detailed data for personnel, pay roll, and man-hours.

VOLUME III - Shows work performed, by type of construction (one- and two-family houses, other residential building, etc.); worked performed, by the location of the work; comparative figures for 1929 and 1935; a size grouping of establishments, by value of work performed; and other data showing the characteristics of construction establishments.

CONSTRUCTION INDUSTRY: 1935

SECTION I

SCOPE, CLASSIFICATIONS AND DEFINITIONS

Of the two volumes previously issued for this study of the contracting branch of the construction industry, Volume I presented certain basic data, and Volume II showed detailed figures for employment. In this, the third volume, certain summaries are presented to illuminate characteristics of contracting establishments not previously covered in these reports. For other data (work performed by type of construction, work performed by the location of the work, and comparisons between the censuses of 1929 and 1935) figures are here presented in full detail as well as in summary form.

REPORT FORMS SUMMARIZED IN THIS VOLUME

In Volume I it was explained that for the collection of statistics from contracting establishments three report forms were used as follows:

Field Canvass - Form 60. - This contains information for all items referred to in this volume.

Field Canvass - Short Form. - This contains information for kind of business, value of work performed, active proprietors and firm members, employees, and pay roll.

Mail Canvass Form. - This form shows data only for kinds of business and the dollar value of work performed.

For most of the tables presented in this volume it was necessary to limit the 1935 figures to Form 60, because the other two report forms either do not cover certain items or do not show them in sufficient detail for use for a particular table. Where the 1935 figures are based on forms other than Form 60, this is stated in the text explaining the table.

The following summary presents the number of each of the three kinds of report forms received, and the amount of work performed as shown by each form is summarized as follows:

NUMBER OF ESTABLISHMENTS, AND DOLLAR VALUE OF WORK PERFORMED, BY REPORT FORMS

Report form	Number of establishments	Dollar value of work performed
Total for all forms	75,047	$ 1,622,862,000
Field canvass	69,838	1,457,710,000
Form 60	46,429	1,330,835,000
Short form	23,409	126,875,000
Form for mail canvass	5,209	165,152,000

LIMITATIONS OF THE CANVASS

A mail canvass was made to supplement the one conducted in the field. To the report forms sent by mail, a 25% response was received. Among these were replies of many large establishments for which construction schedules had not been received from the field canvass. From this it seems reasonable to assume that among the 75% of the establishments that did not respond to the mail canvass, were many that had not been covered by the field canvass.

CLASSIFICATION BY KIND OF BUSINESS

The information utilized by the Census of Business was secured by a nation-wide canvass of establishments representing nearly every kind of business activity - retail trade, wholesale trade, contractors engaged in construction, etc. For ready reference, some of the more important parts of the procedure utilized in the classification of establishments by kind of business are repeated here.

Each establishment was reported in the one field of business activity that was of greatest importance as measured by gross receipts. This was true with the exception of establishments engaged in both real estate and construction. For such establishments real estate and construction activities were reported and tabulated separately. Of other types of establishments commonly engaged in two or more kinds of business, those doing electrical, heating, plumbing and sheet metal work are probably the most important as far as construction is concerned. These are classed as construction only if receipts from this source are greater than those from retail trade, wholesale trade, service, or any other field covered by the Census of Business.

DEFINITION OF TERMS

Certain terms in both the text and tables of this volume are to be interpreted in accordance with the following definitions:

Establishments. - Establishments whose principal business is performing construction work for others, or that are places of business of operative builders, are classed as construction establishments.

A construction establishment is a place in or from which are conducted the estimating, bidding, selling, and other central or branch office activities relating to construction. The report of the establishment covers, in addition to the above, operations at the site of construction (including field or job offices maintained at the site) as well as those at yards operated by the establishment for the storage and repair of equipment.

The establishment may be:

1. An office of a contractor or operative builder. In some cases, the office activities are conducted from residences.

2. A store or shop engaged in retail selling, service, or manufacturing work but whose 1935 gross receipts from construction exceeded those from retail trade, service, manufacturing, or other operations.

3. A real estate establishment that does construction work with its own forces. Included here are only the construction operations of such establishments.

General Contractor. - This term designates an establishment whose major business consists of contracting with the owner (or his agent) for the entire work on a given construction project, being responsible for the execution of the whole, and usually doing some portion of the actual work with its own forces.

General Contractors - Building. - This designates general contracting establishments most of whose work during 1935 consisted of the construction of buildings.

General Contractors - Highway. - This designates general contracting establishments most of whose work during 1935 consisted of highway construction. Highway construction is all work regularly done by highway contractors, and includes roads, streets, alleys, sidewalks, guard rails and fences, parkways, parking areas, airports, bridle paths, athletic fields, highway bridges, grade separations involving highways, light construction sewerage and waterworks improvements.

General Contractors - Heavy. - This designates general contracting establishments most of whose work during 1935 consisted of heavy construction. Heavy construction is all work regularly done by heavy construction contractors, and includes such items as railroad construction projects; heavy construction bridges, sewers and watermains; tunnels; drainage projects; sanitation projects; flood control projects; water supply projects; dredging.

Operative Builders. - An operative builder is the owner as well as the builder of construction projects. As far as the actual construction work is concerned, he performs the functions of a general contractor, that is: he has the responsibility of the entire project, usually does some part of the work with his own forces and sublets the remainder. Speculative builders, owner-builders and development companies are included with operative builders.

Special Trade Contractors. - This term designates establishments engaged in specialized lines of work. Some of this work is performed under sub-contract for a general contractor, and some is done directly for the owner.

The report form lists twenty-six kind-of-business classifications for special trade contractors, including the classification for "other". An analysis of the reports received for air conditioning, cement gun, and several other kinds of business showed that they were too few in number to publish as separate items. At this time it was also found desirable to show certain combined kinds of business as separate items. The result was that twenty-four kind-of-business groups were established for special trade contractors. These are shown in the United States Summary Table 1, Page 1.

Value of Work Performed. - This is the total value of construction performed during the year by the reporting establishments. Total work performed includes all of the construction activities of the establishment in connection with new and repair, and private and public work. It is in terms of contract or order prices; not actual cost. (The figure for work performed by operative builders represents the work actually completed and is expressed in terms of the value of the project.) Work performed covers, however, only the work actually done, including that for partially completed jobs.

In the case of establishments engaged in two or more fields of business, the figures for work performed apply only to the construction work; receipts from all other sources being excluded.

Figures for the value of work performed are classified by five types of construction as follows:

One- and Two-Family Houses includes all work performed in connection with detached houses built for one or two families, and row-type houses with separate entrances. Work for all structures of this kind, even if part of a larger project of some other type, is shown here.

Other Residential Building includes all work performed in connection with structures built to accommodate three or more families. Included here are apartment houses; flats, including those over stores if the structure is predominately residential; hotels; and dormitories. Work for all structures of this kind, even if part of a larger project of some other type, is shown here.

Other Building includes buildings of all types other than residential. This includes factories, office buildings, public garages, schools, etc. Included here also are flats and stores combined where the structure is predominately commercial, and private garages that are not built as part of a residential building project. Work for all structures of this kind, even if part of a larger project of some other type, is shown here.

Highway Construction includes all work of the kinds regularly done by highway construction contractors, and which are listed above in the definition of General Contractors - Highway.

Heavy Construction includes all work of the kinds regularly done by heavy construction contractors, and which are listed above in the definition of General Contractors - Heavy.

Private Construction. - This represents projects owned by individuals, corporations and all other private agencies. Some of this private construction may have been financed by public funds, but the classification here is on the basis of ownership, not on the basis of source of funds.

Public Construction. - This represents projects owned by Federal, State, county, municipal, or other governmental agencies. Some of the private construction may have been financed by public funds, but the classification here is on the basis of ownership, not on the source of funds.

New Construction, and Additions. - New work as well as major additions, such as the building of a wing to a structure are included in this category.

Repairs. - Included here are all remodeling, repairs, maintenance and minor improvements.

Total Proprietors and Firm Members. - This class includes those devoting the major portion of their time to the business, as well as those that are inactive except for financial responsibility for the business. Members of proprietors' families who are working in the business (whether with or without stated salary), but who have no financial responsibility for it, are not included here. Salaried corporate officers, and executives of corporations are not classed as proprietors.

Active Proprietors and Firm Members. - Counted here are only those devoting the major portion of their time to the business of the establishment.

Number of Members of Families of Proprietors Working Without Salary. - Included here are members of families who regularly are working in the business, but to whom no stated salary or allowance is paid.

Employees (Average for the year). - This includes salaried officers of corporations, salaried office workers, wage earners who work at the site of construction, and all other paid employees, but does not include proprietors and firm members of unincorporated establishments. The average for the year was computed in the following manner. Each individual report shows the total for the year for the number of employees working during the pay period ending nearest the fifteenth of each month. These figures were added by kind-of-business groups to arrive at the number of man-months of employment. One twelfth of this figure is shown as the average number of employees for the year.

Pay Roll. - This represents the total amount of salary, wage, bonus, and commission payments to all persons employed by the establishment during the year 1935. Pay roll does not include proprietors' or partners' compensation.

Cost of Material Installed. - This represents the total cost delivered on the job of all materials furnished and used in construction (brick, cement, lumber, steel, and all other materials) and of all equipment furnished and installed (plumbing, heating, electrical apparatus, elevators, and all other equipment incidental to the building). The figure does not include equipment that the building serves to house (factory machinery, power-generating equipment, and similar items). Each establishment reported only material installed by its own forces.

SECTION II

CHARACTERISTICS OF WORK PERFORMED IN 1935.

Figures for the value of work performed for the year 1935 were presented in Volume I in certain detail by kind of business for the United States, for geographic divisions, for States, and for cities that had 500,000 or more inhabitants in 1930. In this section of Volume III, data for work performed are shown in other detail. One series of tables is for the value of work performed by type of construction, and another series of tables shows the value of work performed in accordance with the location of the construction work. With respect to the latter point, it is to be remembered that data shown in all other tables are on the basis of the location of the reporting establishments.

VALUE OF WORK PERFORMED BY TYPE OF CONSTRUCTION, NEW AND REPAIR, AND PRIVATE AND PUBLIC

The total value of work performed reported as $1,330,835,000 by 46,429 contracting establishments is considered here by type of construction, new and repair, and private and public. The figures are presented for each geographic division, for each State, and for each city that, in 1930, had 500,000 or more inhabitants. Table 9 shows figures for all types of building combined, highway construction, and heavy construction by kind-of-business groups. Table 9-A shows figures for one- and two-family houses, other residential building, and building other than residential, by kind of business. The information from these two tables thus affords a basis for a detailed analysis of the sources of the construction business of contracting establishments.

Value of Work Performed by Type of Construction. - Of the total amount of work performed by all contracting establishments, the largest amount is for building other than residential which is 32.0% of the total. Building other than residential is also the largest item for special trade contractors, amounting to 39.4% of all work performed by them. The distribution of work by types of construction for general contractors is quite different from that for special trade contractors. Nearly all (94.2%) of the work of the special trade contractors is for building construction of various types. In the case of general contractors, however, heavy construction which is 29.8% of the total is the largest single item, and highway construction (29.2%) is the next largest single item, while the three classes of building construction combined account for 41.0%. These figures, as well as the ones for each of the five types of construction, are summarized in the following table.

VALUE OF WORK PERFORMED BY GENERAL CONTRACTORS AND BY SPECIAL TRADE CONTRACTORS, BY TYPES OF CONSTRUCTION

Type of construction	Total		General contractors		Special trade contractors	
	Amount (Add 000)	Per cent	Amount (Add 000)	Per cent	Amount (Add 000)	Per cent
Total	$1,330,835	100.0	$829,058	100.0	$501,777	100.0
One- and two-family houses	268,375	20.2	84,899	10.3	183,476	36.6
Other residential	117,952	8.8	26,722	3.2	91,230	18.2
Other building	425,737	32.0	228,037	27.5	197,700	39.4
Highway	245,252	18.5	241,707	29.2	3,545	.7
Heavy	273,519	20.5	247,693	29.8	25,826	5.1

Work Performed by Type of Construction, New and Repair, and Private and Public. - Chart 1 is presented in order to show the relative importance of the different types of construction work. It is to be noted that this chart contains two different scales: one for the total value of work performed for all types of construction combined, and another for the value of work performed by individual types of construction. This arrangement should not cause any difficulty in reading the chart, and has the advantage of allowing the information by individual types of construction to be shown on a larger scale than would have been the case if a single scale had been used for the entire chart.

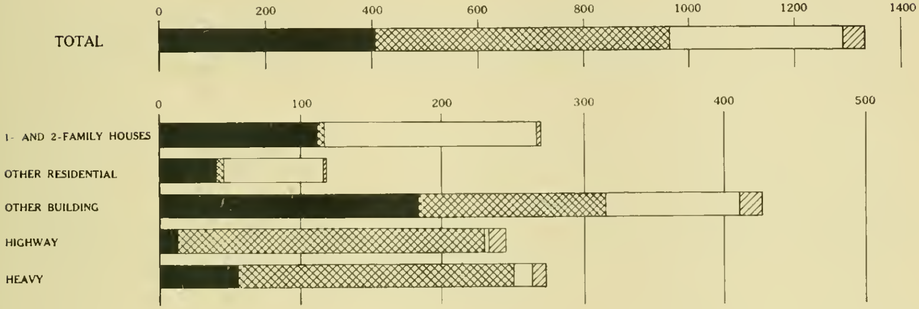
The general differences in the make-up of each type of construction work as apparent from an examination of the chart are described in the following: For one- and two-family houses, the amount of work performed by special trade contractors is about twice as much as that performed by general contractors. The total work of this type performed by general contractors and special trade contractors combined consists almost entirely of private construction, and the amount of repair work is somewhat greater than the amount of new work. In the case of general contracting establishments, however, new private work represents the greater part of the total, while in the case of special trade contractors, the major portion of the total is accounted for by

CONSTRUCTION INDUSTRY: 1935

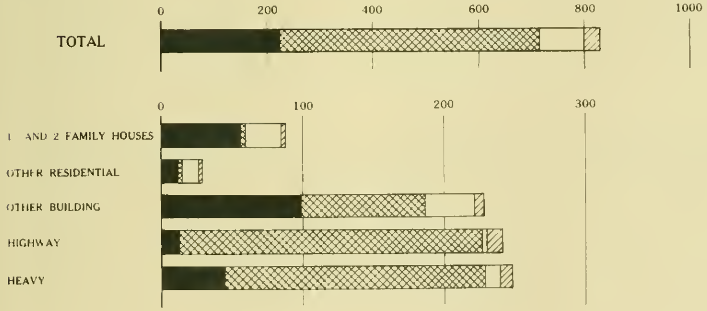
CHART 1 - VALUE OF WORK PERFORMED BY TYPE OF CONSTRUCTION, BY NEW AND REPAIR, AND PRIVATE AND PUBLIC

(All scales are in millions of dollars)

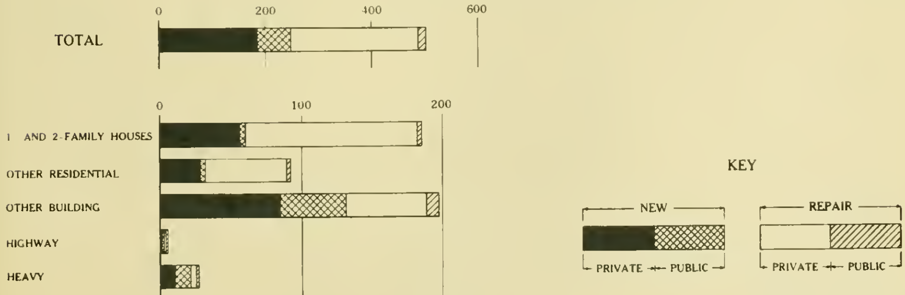
TOTAL FOR GENERAL CONTRACTORS AND SPECIAL TRADE CONTRACTORS



GENERAL CONTRACTORS



SPECIAL TRADE CONTRACTORS



BUREAU OF THE CENSUS

private repair work.

The relationships between the various elements of work performed for building other than residential are very much the same as those for one- and two-family houses. The only point of difference to be noted is the work of general contractors. Here, again, this consists almost entirely of private construction, but the amounts are quite equally divided between new and repair work for building other than residential while for one- and two-family houses the amount of new work is considerably greater than the amount of repair work.

In the case of building other than residential, general contractors performed a somewhat larger part of the total than did the special trade contractors. Of the total amount of work of this type as performed by general contractors. and special trade contractors combined, about 75% is for new construction; considerably more than half of which is private work. New work represents nearly all of the work for building other than residential for general contractors, and about two-thirds the work for special trade contractors.

General contractors account for very nearly all of the total amount of work performed for both highway construction, and for heavy construction. It is also to be noted that for each of these types of construction, new work for public ownership is a very large part of the total.

Work Performed by Type of Construction and by Geographic Divisions and Kinds of Business. - Work performed by type of construction shows considerable variation both by the location of the contracting establishment and by kind of business with which the establishment is concerned. In order to illustrate this condition, certain figures are presented in Table H for the United States and for two selected geographic divisions. The two particular geographic divisions were selected so that one would be composed of northern States and the other southern States. The former is the East North Central Division including Illinois, Indiana, Michigan, Ohio, and Wisconsin. The latter is the West South Central Division including Arkansas. Louisiana, Oklahoma, and Texas.

From Table H it is noted, for example, that one and two-family houses represent 20.2% of all of the work performed in the United States. The figure for the East North Central Division, however, is 18.7% and that for the West South Central Division is 13.0%. For one and two-family houses, it is also seen that although the figure for all kinds of business combined is 20.2%, elevator contractors performed practically no work in this class, but that carpentering contractors performed 61.5% of their total work in this class.

As far as the individual kind of business is concerned, it is seen that for concreting contractors, one- and two-family houses represent 33.9% of the total work of establishments located in the East North Central Division, and 19.9% of the business of the establishments

TABLE H.- VALUE OF WORK PERFORMED BY TYPES OF CONSTRUCTION AS PERCENTAGES OF TOTAL WORK PERFORMED, FOR THE UNITED STATES, EAST NORTH CENTRAL DIVISION, AND WEST SOUTH CENTRAL DIVISION, BY KINDS OF BUSINESS

(Data are from Form 60 only. The sum of one- and two-family houses, other residential, other building, highway and heavy = 100%)

located in the West South Central Division. It is also seen that for establishments classed in the heating and plumbing group, one- and two-family houses represent about the same proportion of the total value of work performed in the East North Central and in the West South Central Divisions. The figures are 40.5% and 40.7% respectively. There is, however, considerable variation in the figures for the kinds of business comprising the heating and plumbing group. Although the total for all establishments in the East North Central Division is 40.5%, the figure for heating and piping contractors is 23.0%; that for heating, piping and sheet metal contractors is 50.5%; and that for heating, piping, plumbing and sheet metal contractors is 27.8%. For the last mentioned kind of business, the figure is 45.3% for the West South Central Division. From the figures quoted, it is evident that in any analysis of data for a specific kind of contracting business, it is necessary to utilize the figures for that kind of business and not to base conclusions upon relationships that have been found for all kinds of business combined. It is also necessary to consider the figures for the individual kind of business according to the location of the contracting establishment, rather than to draw conclusions for all kinds of business combined for different parts of the country.

VALUE OF WORK PERFORMED BY LOCATION

All figures described for work performed in Volumes I and II, and so far in Volume III are according to the location of the contracting establishment, which might not be the same as the location of the work. In Volume I it has been pointed out that data for the value of construction on the basis of the establishment location would probably be especially useful for problems involving the determination of the size of markets for construction material or equipment. It was also stated that if the figures were to be used for ascertaining per capita expenditures for construction, or for making other comparisons between the value of construction and other statistics that are for States or other geographical units, it would be necessary to have the construction data by the location of the work.

Table 10 of this volume shows the value of work performed by location in the home city, in the home State exclusive of the home city, and outside of the home State. This information was reported by 46,429 contracting establishments that performed work amounting to $1,330,835,000. These are all of the establishments that reported on Form 60 for the field canvass.

Figures for the amounts and percentages of work performed by location are summarized on Page 105 for the United States by kind of business. From these figures, it will be noted that of the total amount of work performed for all kinds of business combined 57.5% is in the home city, 27.4% is in the home State exclusive of the home city, and 15.1% is outside of the home State. The corresponding figures for general contractors are 44.7%, 34.3%, and 21.0%, and for special trade contractors are 78.5%, 16.1%, and 5.4%.

Value of Work Performed Outside Home State by Kind of Business. - As in the case of certain other figures that have been presented for contracting establishments, it is found that those for work performed outside of the home State vary both by kind of business and by the location of the contracting establishment. This condition will be apparent from the figures presented in Table J for the value of work performed outside of the home State as a percentage of the total value of work performed. The figures are by geographic divisions and kind of business.

Considering the figures for the United States, it is found that the establishments having the smallest proportion of their total work performed in States outside of the home State are plumbing contractors for which the figure is 1.0%. The largest proportion of the total work performed in other States is for general contractors engaged in heavy construction with a figure of 35.4%.

Table J also shows that for all kinds of business combined, contracting establishments for the United States performed 15.1% of the total value of their work in States outside of the home State. The corresponding figures for the establishments located in the various geographic divisions differ considerably from this amount. In the case of those located in the Pacific Division, the figure is 6.6%, while in the case of those located in the West North Central Division, the figure is 31.7%.

Considering figures both by individual kind of business and by the location of the establishments, it is seen that whereas all establishments in the United States for general contractors engaged in heavy construction performed 35.4% of their work outside of their home States, that in the case of the Pacific Division, the figure is 8.2%, and for the West North Central Division, it is 73.5%. Even in the case of the establishments of plumbing contractors for which it is found that for all establishments in the United States 1.0% of the total business was done outside of home States, it is noted that the establishments located in the West South Central Division performed 7.4% of their business outside of the home State.

It is likely that differences of the kind indicated above would also be found between individual States, and for which figures are available from Table 10. This table shows the value of work performed by location. The figures are in detail by kind of business for each State, and for each city of 500,000 or more inhabitants.

States Outside of the Home State in Which Work is Performed. - In the case of the contracting establishments for each State, the amount of work performed for each of the States outside of the home State is shown by Table 10-A. It is found that all contracting establishments of each State performed work in at least one outside State. For the establishments in the States of Montana, Nevada and New Mexico, all work performed outside of the home State is located in one other State. For the other extreme, contracting establishments located in Illinois performed

TABLE J.- VALUE OF WORK PERFORMED OUTSIDE HOME STATE AS PERCENTAGE OF TOTAL WORK PERFORMED, BY GEOGRAPHIC DIVISIONS, AND KINDS OF BUSINESS

Kinds of business	United States	New England	Middle Atlantic	East North Central	West North Central	South Atlantic	East South Central	West South Central	Mountain	Pacific

work in 44 other States. The set of figures shown below affords further information for the number of States other than the home State in which work was performed. From these it is seen, for example, that the establishments located in each of thirteen States performed work in from five to nine States outside of the home State.

Number of States outside of the home State in which work was performed	Number of States
0 to 4	10
5 to 9	13
10 to 14	12
15 to 19	7
20 to 24	1
25 to 29	1
30 to 34	2
35 to 39	2
40 to 44	1

Although the establishments of some States performed work in quite a number of States outside of the home State, a large part of the total amount of such work is accounted for by that done in a single State. Establishments located in Alabama, for example, performed in other States, work amounting to $1,458,000. Of this figure, $522,000 or 35.8% was performed in the State of Tennessee which was the one State outside of the home State in which the establishments located in Alabama performed the largest amount of work. The total work performed outside of the home State for all establishments in the United States is $201,085,000. Of this, the largest States outside of the home States, in terms of work performed, account for $59,440,000, or 29.6%. Similarly, taking each of the three largest States outside of the home State the total amount of work performed is $122,125,000 or 60.7% of the total amount performed outside of the home State. With respect to the figures for "three" States it should be noted that in some cases the establishments of a State did all work outside of the home State in one or two States.

SECTION III

CONSTRUCTION IN 1929 AND 1935

Statistical data available from a number of sources reflect the relative amount of construction for each year. From such data it is known that although 1929 was not the largest year it was one with a high level of activity. By 1935 the amount of construction was increasing from the low point reached a few years earlier. The 1935 amount, however, was still small in comparison with that for 1929.

The Census studies of construction for 1929 and for 1935 contain information for the value of construction, employment, expenditures for material, and other aspects of construction by the contracting branch of the industry. A comparison of the results of the two census studies is made for the purpose of ascertaining the characteristics of construction operations by contractors for a year of considerable activity and for one with much less activity. The object is to note not only the changes that occurred in the total value of work, but also those relating to employment, and to other phases of the operations of contracting establishments.

DIFFICULTIES WITH RESPECT TO DIRECT COMPARISONS

It would not be valid to make direct comparisons between the figures published for 1929 with those described so far for 1935. This is because the two sets of figures are basically different in a number of particulars, the most important of which are the kinds of business included, and the content of the figures summarized.

Differences in Scope Due to Methods of Canvass. - The lack of uniformity in the kinds of establishments included was unavoidable as a consequence of differences in the methods of canvass. In 1929, the figures were secured, for the most part, by means of a mail canvass. Many months were spent in preparing mailing lists of individuals and establishments that were believed to be engaged in the use of construction materials and labor in construction work for others, or for themselves for speculative purposes. The individuals or establishments were then requested to report their construction operations. Those to whom the requests were sent included general contractors; subcontractors, or special trade contractors; operative or speculative builders; real estate firms; manufacturers or fabricators of construction materials that also erect on construction jobs; and dealers and jobbers that operate a construction or installation department in connection with their sales business. The object was to cover all kinds of construction except that done by "force account".

The figures for 1935 were secured, for the most part, by means of a field canvass. The individuals and establishments included in construction are those that did this either as their entire business, or as the major part of their total business. This method was established to fit in with the plan determined for the field canvass whereby the individual making the canvass was, in the territory assigned to him, to call upon all establishments of the kinds covered by the Census of Business, and to use only a single report form for showing the operations of any one establishment.

Many establishments are engaged in more than one kind of business. As noted in Volume I for the Construction Industry, electrical contractors often maintain their places of business in stores in which they sell electrical appliances at retail. The reports for establishments of this kind are included in the Census of Business for 1935 as retail trade or contracting, depending upon which of these kinds of operations accounted for the major portion of the gross receipts of the establishment. According to the method used in 1929, however, any electrical contract work done by an establishment of this kind should have been included with the figures for the construction industry. Because data are not available for the amount of construction work performed by establishments whose principal business is in some other field, their is no basis for adjusting for this condition in the comparisons between the figures for 1929 and 1935.

Content of Reports for 1929 and 1935. - The 1929 Census of the Construction Industry was designed to get data from establishments whose business amounted to $25,000 or more, and the figures as published in detail are based upon the reports of such establishments. Establishments whose business was less than $25,000, were not requested to furnish figures, but 21.0% of them did so; showing the amount of business for the year. These figures were tabulated and, with the exceptions of certain estimates for the total amount of work performed and for the amount of work sublet by all active establishments, are the only ones shown for establishments whose business amounted to less than $25,000.

In the case of the 1935 Census, data are presented in detail for establishments that performed work amounting to $500 or more.

METHODS FOR COMPARING 1935 WITH 1929

To overcome the difficulties resulting from differences in scope and method for the censuses of 1929 and 1935, construction operations for the two years are compared on the basis of reports for individual establishments. This was accomplished by checking the reports for one year against those for the other year. The reports for the two years were considered to match if (1) they were for the same establishment as indicated by the name, and (2) the establishment was engaged in substantially the same kind of business for each of the years. Examples of business considered to be substantially the same are: "builder" and "carpenter", "builder" and "mason", "highway" and "heavy", "concreting" and "highway", and "plumbing" and "plumbing and heating". These differences, it will be noted, are such as could result from the use of different words for describing the kind of business, or represent kinds of work that are commonly performed by one kind of contractor. In all cases, the classification used for kind of business is the one appearing on the 1935 report.

The 1935 reports were compared only with the 1929 reports that showed a business of $25,000 or more, of which there were 30,597 reports. For 1929, there were an additional 23,881 reports for establishments that showed business of less than $25,000. It was decided that the extra work that would have been involved in the use of the latter reports was not justified. In the first place, all but 17% of the total amount of work performed as estimated for all reports for the year 1929 was accounted for by the 30,597 establishments. It thus appeared that the use of the smaller reports could not have added materially to the information to be obtained, but would have very nearly doubled the work of making the comparisons. A second consideration against the use of the reports for the smaller establishments was that they contained, for the most part, information only for the total amount of business handled.

The 1929 figures to which reference has been made in the previous paragraph are as follows:

Classification of establishments	Number of establishments	Work performed	
		Amount	% of total
Total	144,396	$5,778,453,565	100.0
$25,000 and over	30,597	4,794,772,665	83.0
Under $25,000	113,799	983,680,900 1/	17.0
Reporting figures	23,881		
Not reporting figures	89,918		

1/ Estimated from reports for 23,881 establishments.

Three report forms as described on Page 1, were used for the 1935 canvass. All three of these forms were used in making the comparison with 1929; the results of which are shown in detail in Table 11. Of the three 1935 report forms, Form 60 for the field canvass contains certain information not appearing on the other two forms. Hence, in presenting various aspects of contracting operations in Table 12, the figures are from Form 60 only, as far as the 1935 amounts are concerned.

DATA FOR IDENTICAL ESTABLISHMENTS FOR 1929 AND 1935

1935 reports were matched for 11,089, or 36.2%, of the 30,597 larger establishments that reported in 1929. In connection with these and all other figures for the 1929 and 1935 comparison it is to be recognized that there are certain limitations in the matching procedure. Reports have undoubtedly been missed because during the period from 1929 to 1935 there was a change in the name of the establishment, a difference in the kind of contracting business in which the establishment stated it was engaged, or even a change in census classifications whereby a report might have been shown as construction one year, and retail trade or some other field of the census the other year.

From these considerations, it will be evident that sweeping conclusions cannot be made from these figures. It cannot be said, for example, that 64% of the establishments that reported in 1929 did not report in 1935. Neither can it be said that of the establishments in business in 1929, 64% were no longer in business in 1935. The relative degree of completeness of the coverage of the censuses for the two years is very likely not reflected by these figures. With respect to this point, it is of interest to note that the value of work performed as shown by the reports that were matched for the two years is about half of the value of the work performed as shown by all reports.

	1929	1935
Total work performed	$4,794,772,665	$1,622,862,000
Work performed for reports matched	2,115,513,000	832,088,000
Percent of total work performed for matched reports	44.1%	51.3%

The percentage of the total work performed in 1929 that is represented by the figures for reports that were matched is shown in Table 11 for each geographic division, and for each State. The purpose of these figures is to afford a basis for judging the size of the "sample" secured for the matched reports. In connection with these figures, it is to be noted that whereas the percentage is 44.1% for the United States, it ranges from 22.4% to 73.9% for the individual States. The figures for the number of establishments should also be used with respect to sample size, because they show that, in general, the extreme fluctuations from the figure of 44.1% for the United States total occur for States for which the number of reports are small.

Value of Work Performed in 1929 and 1935. - The figures of

Table 11 show that for 11,089 establishments for the United States, work performed in 1935 was 39.3% of the amount for 1929. As in the case of other data to which reference has been made, the percentages vary considerably by States; the lowest being 27.5% for Mississippi, and the highest 175.1% for Idaho.

From Table 11 it is also seen that work performed in 1935 expressed as a percentage of that for 1929, varies not only by States, but also by kind-of-business groups. The figures for the United States are: 35.2% for general contractors engaged in building, 53.4% for general contractors engaged in highway and heavy construction, and 32.6% for special trade contractors.

Other Data for 1929 and 1935. - Table 12 is based on the use only of Form 60 for 1935, and shows figures for matched reports for the value of work performed, the number of active proprietors and firm members, the average number of employees for the year, pay roll and cost of material installed. The results as summarized by Table K show that work performed in 1935 by 8,899 contracting establishments is 39.5% of the amount performed by the same contractors for 1929. This percentage is substantially the same as the figure of 39.3% secured by matching reports using all three different forms for the 1935 canvass.

TABLE K. - CONSTRUCTION OPERATIONS IN THE UNITED STATES FOR IDENTICAL ESTABLISHMENTS REPORTING IN 1929 AND 1935
(Matching of reports was on the basis of Form 60 for 1935)

	1929	1935	1935 as % of 1929
Number of establishments	8,899	8,899	100.0
Value of work performed	$1,877,437,000	$742,455,000	39.5
Total proprietors and firm members	7,698	6,434	83.6
Employees(average for the year)	375,153	219,018	58.4
Pay roll	$ 722,567,000	$258,519,000	35.8
Cost of material installed	$ 780,998,000	$314,387,000	40.3

In utilizing the figures of Table K, it will, in general, be safer to consider various relationships before arriving at conclusions. Pay roll per person employed, for example, was $1.926 for 1929 and $1,180 for 1935. This does not mean that there was a corresponding decrease in the amount of the construction expenditures that went to labor. In fact, pay roll as a percentage of work performed was 38.5% for 1929 and 34.8% for 1935. Another way of looking at this is to note that the percentage relationships between 1935 and 1929 figures were about the same for both work performed, and for the amount of the pay roll. The figures are 39.5% and 35.8% respectively. In the case of the average number of employees for the year, however, the 1935 figure is 58.4% of the one for 1929. In connection with the pay roll figures, it is to be recognized that they reflect changes both in the amount of employment and in wage payments. From the various relationships that have been mentioned, it appears that an important factor in causing earnings per employee in 1935 to be less than those for 1929 was that the number of persons employed for a given dollar value of work in 1935 was larger than was the case in 1929.

The figures presented in Table K, and also in detail in Table 12, lend themselves to making comparisons between the percentage of work performed that is represented by pay roll and the percentage that is represented by cost of material for 1929 and for 1935. For 1929 pay roll is 38.5% of work performed, and cost of material installed, 41.6% of work performed. For 1935 the corresponding figures are 34.8% and 42.3%.

Although figures are for the same establishments in the same kind of business, it must be recognized that the character of the work done by the establishments in 1935 might possibly have changed considerably from that for 1929. For example, it has been shown elsewhere in these reports that repair work represents a relatively large proportion of the total work of certain special trade contracting establishments. It is not possible to account for the effect of repair work in connection with the figures for both 1929 and 1935. Nevertheless, sight must not be lost of the fact that such factors could be present, and might account for some of the changes noted in the relationships between the figures for the two years.

SECTION IV

ORGANIZATION OF CONTRACTING ESTABLISHMENTS

In the history of the construction industry, considerable emphasis is placed upon the technological progress that makes possible the construction of modern skyscrapers, long span bridges, vehicular tunnels, huge dams for power projects and flood control purposes, and other gigantic projects. Because operations of this nature are such as to challenge the imagination, it is natural that they should be given wide publicity. Perhaps as a consequence of this, one thinking about construction is likely to first have in mind the large projects. Such construction operations, however, while large in themselves represent but a small part of the total work done by contracting establishments in the course of a year. It also follows that the majority of the number of contracting establishments perform the greater portion of their work in connection with smaller projects.

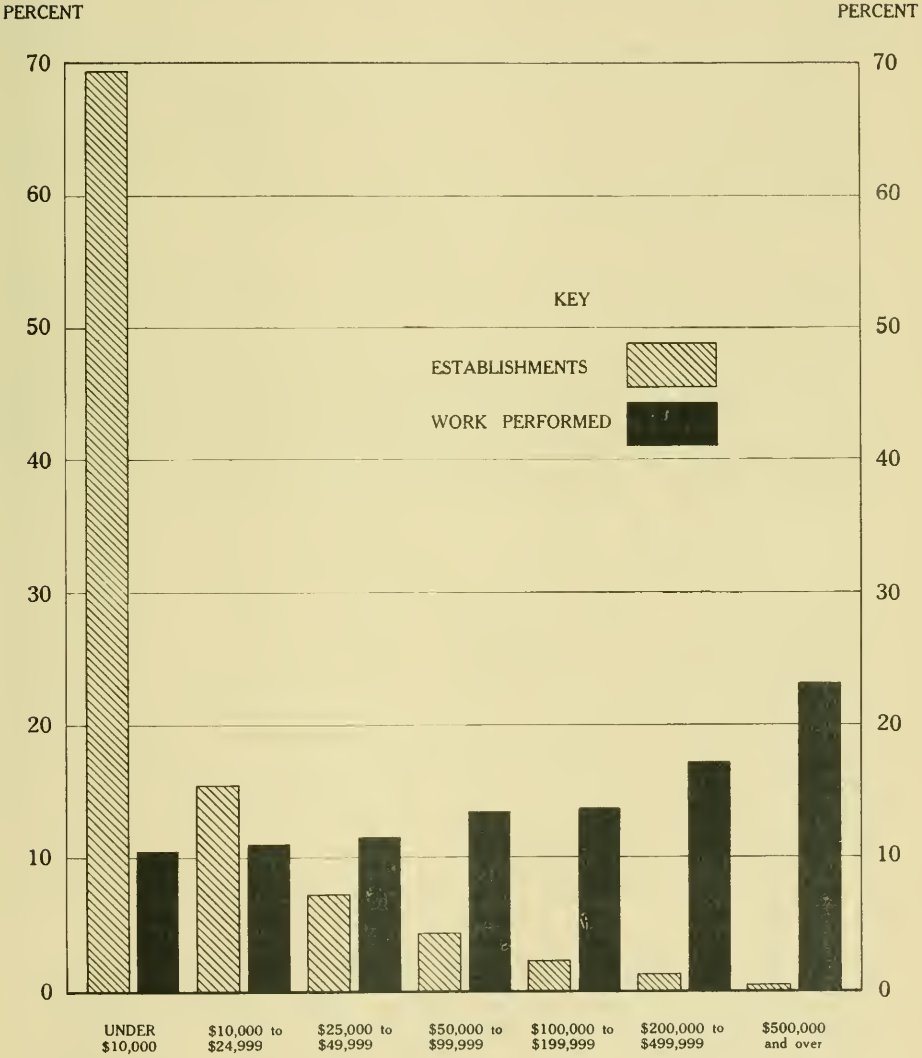
It is the object of this section to present sufficient data to describe contracting establishments from the standpoint of the amount of work performed and the legal form of their organization. In addition to these subjects, data are also presented for the extent of the concentration of contracting establishments in the larger population centers.

Establishments Classified by Amount of Work Performed.

Work performed as reported by 75,047 contracting establishments (the total number from which reports were received) amounts to $1,622,862,000, or an average of $21,625 per establishment. These over-all figures do not reflect the picture in full detail. A better understanding of the value of work performed per establishment can be secured from the classification by amount of work performed from Table A, Page 30. This shows that the value of work performed by the majority of the number of establishments is smaller than the average figure for all establishments. 69.5% of the number of the establishments performed work amounting to less than $10,000, and the aggregate amount of work performed by these establishments is 10.5% of the total for all establishments. At the other end of the scale, it is found that 7.9% of the number of establishments performed work amounting to $50,000 or more, and that the work of these establishments is 67.0% of the total. Chart 2 shows the figures of Table A graphically.

CONSTRUCTION INDUSTRY: 1935

CHART 2. - PERCENTAGE OF TOTAL NUMBER OF ESTABLISHMENTS, AND OF TOTAL VALUE OF WORK PERFORMED, BY GROUPS ACCORDING TO THE AMOUNT OF WORK PERFORMED



BUREAU OF THE CENSUS

The average value of work performed per establishment for general contractors is considerably greater than the average amount for special trade contractors: the figures being $82,175 and $10,676, respectively. In the classification of establishments by the value of work performed, the differences for these two kind-of-business groups are also apparent. Establishments that performed work of less than $10,000 are 26.5% of the total number of establishments for general contractors, and 77.1% of the number for special trade contractors. Work performed by these establishments amounts to 1.7% of the total for general contractors, and 22.7% of the total for special trade contractors. It is also seen that establishments performing work of $50,000 or more represent 31.7% of the total number of establishments for general contractors and only 3.8% of those for special trade contractors. The establishments in this group account for 86.3% of all of the work of general contractors and 40.2% of that of special trade contractors.

The figures quoted in the foregoing, and as has been previously stated, are based on reports including both of the forms of the field canvass, as well as the form used in the mail canvass (see Section I for fuller information about the report forms used for the canvass). The average amount of work performed per establishment for Form 60 of the field canvass is $28,664, for the short form of the field canvass $5,420, and for the mail canvass $31,705. The marked differences in the averages for the value of work performed by report forms indicate that there would also be differences in the classification of establishments by the value of work performed if made by report forms. That this is actually the case is seen from the figures of Table A by report forms.

With further reference to the classification of establishments by the amount of work performed, two additional tables are presented. Table B shows figures for general contractors in detail, by general contractors engaged in building, general contractors engaged in highway construction, and general contractors engaged in heavy construction. Table C shows figures for special trade contracting establishments. The groupings for Table B differ from those for Table C, and both differ from those shown in Table A. This is because the groupings have been made suitable for the general type of contracting business covered by the table. In the case of table B for the establishments of general contractors, additional groups are shown at the upper end of the scale, where a considerable proportion of the total value of construction work is to be found. Table C for special trade contractors, on the other hand, shows smaller break-downs at the lower end of the scale, because it is here that the larger number of establishments are found.

Data for Establishments Operated by Individual Proprietors and Partnerships. Contracting establishments operated by individual proprietors or partners represent 86.7% of the total number of establishments, but accounted for only 42.7% of the total value of the work performed by all establishments. From this it appears that establishments operated by individual proprietors or partners are, in general, smaller than those operated under some other legal form of organization. This does not necessarily mean that every small establishment is operated by individual proprietors or partners, and that every large establishment is operated under some other form of organization.

Information for establishments operated by individual proprietors and partnerships is shown by Table D by kinds of business. From this it is seen that the number of establishments operated by individual proprietors and partnerships, while 86.7% of the total number of establishments for all kinds of business combined, is 65.7% for general contractors and 90.1% for special trade contractors. Examination of the figures by detailed kinds of business, shows that within the two groups for general contractors and special trade contractors, there is considerable variation from the group totals. From the figures of Table D it is also seen that the number of establishments operated by individual proprietors and partnerships expressed as percentages of the total number of establishments show considerable variation by kinds of business. The lowest figure is 41.9%. This is for general contractors engaged in heavy construction. The highest figure is 97.0% for carpentering contractors.

The figures in Table D are based on reports for both of the forms of the field canvass. By using only the reports for Form 60 of the field canvass, the results shown in Table E are secured. The latter table presents data by two classes of legal form of organization. One is for establishments operated by individual proprietors and partners. The other is for establishments having some other form of organization. Certain figures for these two groups of establishments, for all kinds of business combined are as follows:

	Proprietorships and partnerships	Other form of organization
Number of establishments	38,142	8,287
Active proprietors and firm members	44,531	- -
Work performed	$529,248,000	$801,587,000
Work performed per establishment	$ 13,876	$ 96,728
Number of employees (average for the year)	152,419	226,648
Pay roll	$148,162,000	$288,640,000
Pay roll as percent of work performed	28.0%	36.0%

One point of interest in connection with the figures for establishments operated by individual proprietors and by partners, and those operated under some other legal form of organization, is that in the case of the former, expenditures for pay roll represent 28.0% of the total value of work performed, and that for the latter group, the figure is 36.0%. Part of this difference is due to the fact that, in the case of establishments operated by individual proprietors or partners, the proprietors and partners perform construction work themselves. They secure their income from profit withdrawals, which are not counted in the figures for pay roll.

Proprietors and Firm Members

Additional information for the personnel of contracting establishments operated by individual proprietors and partnerships is available from Table F. For such establishments two sets of figures are shown for the number of proprietors and firm members. One set of figures is for the total number, and the other set is for the number that are active.

From these figures it is found that the 38,142 establishments reported as being operated by proprietors and partnerships, had a total of 45,262 proprietors and firm members. Of this number 44,531 were actively engaged in the business.

Concentration of Contracting Activities

Although contracting operations are conducted throughout the United States, the majority of the work is done by the establishments to be found in a relatively small number of the more populous localities. This does not necessarily mean that there is an equal and corresponding concentration in the actual location of the work performed, because the figures presented here (as in the case of all others in this volume, except those for Tables 10 and 10-A) are according to the location of the reporting establishment which might be different from the location of the work.

Data have been summarized for 89 areas, each of which, for the most part, consists of a single county, and each of which contains a city of 100,000 or more inhabitants. The figues for the number of inhabitants are from the 1930 Census of Population. According to this Census, there were at that time in the United States 93 cities of 100,000 or more inhabitants. The areas used here were determined by taking for each of these cities the county or counties in which it is located. In some cases there is more than one city of 100,000 or more inhabitants in a county, with the result 89 represented the total number of areas used in this manner.

Using the information from all three of the report forms of the canvass, it is found that for the 89 areas which contained 38.9% of the total population of the United States, there are 36,357 establishments, or 48.4% of the figure of 75,047, which represents the total number of establishments for the United States. The 36,357 establishments performed work amounting to $1,048,621,000, which is 64.6% of the figure of $1,622,862,000 for the United States. The figures for the number of establishments and for the total value of work performed for each of the 89 areas are shown in Table G. In connection with these figures it will be noted that the New York area is the one with the largest number of establishments, and that Philadelphia, Pennsylvania has the next largest number. The establishments in these two areas represent 12.3% of the total number for the United States, and performed work amounting to 15.8% of the total for the United States.

For the two forms used for the field canvass, information in addition to that for work performed, is available for the number of active proprietors, the average number of employees for the year, and the amount of the pay roll. These figures are also summarized in Table G from which it is noted that work performed for the 89 areas is 65.1% of that for the United States. Figures for the 89 area as percentages of the United States for the average number of employees for the year, and for the total annual pay roll are in fairly close agreement with the percentage for work performed. The number of active proprietors and firm members for the 89 areas, however, is only 44.0% of the figures for the United States. This indicates that there are a larger proportion of incorporated establishments in the 89 areas than in the United States as a whole. Also on the basis of the date presented in Table G, it is found that the average amount of work performed per establishment is $28,266 for the establishments located in the 89 areas, and only $14,035 for establishments located in other parts of the United States.

The figures to which reference has been made in the foregoing paragraph, based on information from the two report forms used for the field canvass, are summarized below for all establishments in the United States, and for those located in the 89 areas.

	United States	Total for 89 areas	Areas as % of United States
Number of establishments	69,838	33,553	48.0
Value of work performed	$1,457,710,000	$948,441,000	65.1
Number of active proprietors and firm members	69,193	30,440	44.0
Employees (average for the year)	409,137	259,248	63.4
Pay roll	$ 470,275,000	$324,348,000	69.0

CONSTRUCTION INDUSTRY: 1935
UNITED STATES SUMMARY
TABLE 1.- ESTABLISHMENTS, WORK PERFORMED, PERSONNEL, AND PAY ROLL, BY KINDS OF BUSINESS

Kinds of business	Total for all reporting establishments		Establishments reporting work performed, personnel, and pay roll					Establishments reporting work performed only	
	Number of establishments	Value of work performed (add 000)	Number of establishments	Value of work performed (add 000)	Active proprietors and firm members	Employees (Average for year)	Pay Roll 2/ (add 000)	Number of establishments	Value of work performed (add 000)
UNITED STATES TOTAL	75,047	$1,622,862	69,838	$1,457,710	69,193	409,137	$470,275	5,209	$165,152
GENERAL CONTRACTORS	11,491	944,279	9,883	834,391	8,286	258,344	277,912	1,508	109,888

CONSTRUCTION INDUSTRY: 1935

SECTION IV

EXPLANATION OF TABLES

This section is comprised of six sets of tables as follows:

Value of Work Performed by Type of Construction. - Figures for this are shown by Table 9 by kind-of-business groups, and by Table 9-A by kinds of business. Table 9 shows the value of work performed for four principal groups - total, building, highway construction, and heavy construction. Those for Table 9-A are one-and two family houses, other residential building, and other building. The principal groups of each of these tables are further broken down by new construction, and repairs, and each of these items is by private and public.

Value of Work Performed by Location. - Tables 10 and 10-A are the only ones in these reports that present figures by the location of the work (figures for all other tables are by the location of the reporting establishments). In Table 10 the value of work performed is shown by kinds of business by location in the home city, in the home State, outside of the home city, and outside of the home State. Table 10-A distributes the value of work performed outside of the home State to the States in which the work is located. The figures are by kind-of-business groups.

Comparisons between 1929 and 1935. - Tables 11 and 12 are based on reports for identical establishments for the Census of the Construction Industry for 1929 and 1935. The figures of Table 11 include all three report forms for the 1935 canvass, and are by kind-of-business groups for all establishments reporting business of $25,000 or more in 1929, and establishments reporting in both 1929 and 1935. The information is for the number of establishments, and the value of work performed.

Table 12 is based on reports on form 60 of the field canvass, and shows data by kinds of business for number of establishments, value of work performed, active proprietors and firm members, employees (average for the year), pay roll and cost of material installed.

The tables of each set appear in the following order: United States Summaries, by Kinds of Business, and by States; Geographic Divisions; States; and Cities of 500,000 or More Inhabitants.
